FOR SPORT, FOR LIFE.

#FORSPORTFORLIFE

1888.

In France's Jura region, a small company was taking its first steps towards establishing what would become a leading brand in outdoor and winter sports gear.

From combs to eyewear, and then pioneering in the ski goggle business, Bollé continues to equip the most accomplished athletes who have come to rely on the style and performance of the brand's products.

Bollé's know-how covers a wide variety of sports (alpine skiing, cycling, golf, sailing...) and the brand's expertise has marked the industry's history with several revolutionary patents. As a key benchmark in the eyewear industry for the quality and the performance of its products, Bollé's skill was first and foremost to

master the design not only for sunglasses, but for iconic eyewear.

From the ground up, Séraphin Bollé and then Georges Bollé created unforgettable lifestyle designs such as the famous cat-eye nylon model, a must-have accessory for top celebrities of the period.

130 years of craftsmanship and trendsetting have given Bollé its enviable position today. The brand's inspiration and history shine through today's summer and winter collections, along with a tenacity that has helped it rise step-by-step with unerring commitment to innovation, creativity and quality.

REVEAL THE INVISIBLE

PHANTOM
LIGHT ADAPTIVE LENS TECHNOLOGY

AVAILABLE ON WINTER & SUMMER

Improved vision • Improved confidence. Phantom lens technology - developed in partnership with Essilor® Sun Solution™ - redefines how you see the environment, industry leading optical clarity & light-adaptive lens allow you to reveal the invisible whatever the light conditions.

WHAT IS PHANTOM ?

The Phantom lens is a combination of 3 advanced technologies that revolutionize how you see your environment. Made with NXT* material for enhanced definition and a molecular photochromic filter that adapts to all light conditions. Also, a high-contrast filter improves color and depth perception.

DEVELOPED IN PARTNERSHIP WITH

MADE WITH NXT* MATERIAL

OPTICAL CLARITY

Whether you are on a bike, a slope or out in the country, perfect vision is crucial if you are to perform at your very best. With optical clarity close to that of a mineral lens, our NXT* lenses considerably improve your vision acuity, thus improving hand-eye coordination and intricate motor skills. This enables athletes at every level to employ the technology required to beat the competition.

HIGH IMPACT RESISTANCE

NXT* lenses not only protect you 100% from harmful UV rays, but are also built for maximum impact resistance. NXT* is one of the strongest materials on the market.

Originally adapted from military use - jet canopies and helicopter windshields - lenses are subjected to rigorous high-velocity impact tests.

LIGHTWEIGHT

NXT* material is close to the lightest lens material available today, at 14% lighter than polycarbonate. This allows for larger designs with fuller coverage, ultimate protection and utmost comfort.

AVAILABLE IN PRESCRIPTION

Because everyone's vision is unique, our NXT* lenses are available with our Bi-Ten Technology, suitable for 99% of prescriptions.

WHAT IS PHANTOM ?

OPTICAL CLARITY

Made with NXT* material, Phantom lenses raise the optical clarity of our lenses to a new level. NXT* material is packed with a lot of features such as optimal clarity, lightweight, high impact resistance, chemical resistance, and of course 100% UV protection. Ideal for a sport use, Phantom lenses will offer maximum protection & comfort of vision for your eyes.

PHOTOCHROMIC PERFORMANCE

Phantom lens technology adapts to any light condition, ensuring precise visual acuity whatever the weather. The lens tint changes with the light from cat.1 to cat.3. Enhanced vision whatever the conditions.

HIGH CONTRAST

Rollé has advanced the performance of Phantom lens technology by adding a high contrast filter on its lenses. Available on all Phantom lenses, the high contrast filter boosts colors and significantly enhance your vision. Whether you are on the road or on trails, high contrast lenses will help you to perceive the obstacles.

PHANTOM+
LIGHT ADAPTIVE LENS TECHNOLOGY

Phantom+ combines all of our 5 technologies adding a 4th additional element: polarization.
Polarized lenses are largely recognized today for their benefits in terms of blocking parasitic light reflections.
So it felt right to add them to our already unbeatable lens technology to improve its level by yet another step.
Equipped with Phantom+ lenses, you will be ready to take on any adventure.

HIGH
CONTRAST

POLARIZATION

PHANTOM COURT

Whether you are playing on clay, quickset or grass, vision is what matters in tennis. Being able to see the ball clearly at speeds of more than 150 km/h will give you a certain advantage to return a service or to prepare your forehand shot. Our Phantom Court lens offers unique vision for tennis players, enhancing contrasts to highlight white and yellow colors on every court. Wear Phantom Court lenses and your game will be more precise and reach a new dimension.

PHANTOM BROWN GUN

Golf is another sport where vision is decisive. Developed to improve contrast of green colors and to enhance depth perception, our Phantom Brown Gun lens is the ultimate lens for golfers. Clearly differentiates between greens and fairways, and elevate your game to a whole new level.

HD POLARIZED LENSES

COLOR BOOSTER & GLARE BLOCKER

Bolle introduced a new lens in its sunglasses range in 2019: the HD Polarized lens. Made with polycarbonate, this new lens is a combination of two essential technologies for when the sun is out. HD refers to our contrast-enhancing filter, now available on a great selection of styles. The second ingredient of this lens is polarization technology, which protects your eyes from reflected sunlight. The two components are united in the same lens to create the Bolle HD Polarized lens. You will never have to choose between contrast and polarization again.

WHAT IS THE EFFECT ON THE COLOR SPECTRUM?

The red pigment reinforces the warm colors (red & orange). Red & Orange are the colors we see best as they have the longest wavelengths. That is why we decided to emphasize them, in order to increase contrast and improve your vision.

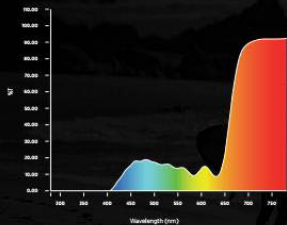

HOW DO HD POLARIZED LENSES WORK?

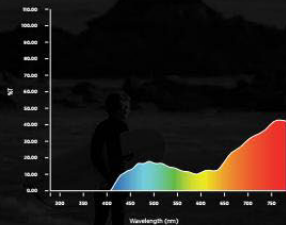

We have infused a specific red pigment into our lenses in order to reinforce the wavelengths of the red color. This solution brings a higher level of contrast and improves depth perception, without altering the base tint of our lenses.

Best to use in bright light conditions, HD Polarized lenses will enhance your sport experience whatever the chosen environment.

HD POLARIZED TNS
TRANSMITTANCE SPECTRUM

TNS
TRANSMITTANCE SPECTRUM

POLARIZATION BENEFITS

Bolle's polarization efficiently filters out 98% of sunlight reflections. By minimizing glare, our polarized lenses reduce eye fatigue and enhance vision clarity to let you enjoy the action all day long.

OTHER TREATMENTS

TREATMENTS & COATINGS

OLEO/
HYDROPHOBIC

Our outer oleo/hydrophobic coating makes it nearly impossible for foreign bodies to latch on to your lenses. Available on all Bolle® HD Polarized models and Phantom lenses.

ANTI-FOG

Unlike the other anti-fog coatings, our anti-fog coating incorporates permanent resistance to fogging but also scratches and chemicals. The treatment is applied to the lens (no spray, no dip coating) for retained properties even after repeated washing and years of use.

ANTI-
REFLECTIVE

Light reflected on the inside of the lenses can harm your eyes. That's why our scientifically-engineered anti-reflective coating is applied to the inside of 6 base HD Polarized Bolle lenses.

FLASH MIRROR COATING:
MASTER BOTH SUNLIGHT
& STYLE

Improve your look and your vision with a flash mirror lens. Mirror coating ups your style while reinforcing filtration.

THE BEST
CHOICE

Bolle helps you choose what is best for you. With this selection of lenses, you will be equipped with our greatest optics to fully embrace your favourite activity. More lenses are also available in the lens reference.

Bolliè lens technology uses 3 different lens base tints to cover the widest range of light conditions, ensuring optimal visual clarity at all times.

FRAME TECHNOLOGY

Wearing Bolle's ultimate lenses is key to enhancing your vision of the world, yet it is not enough. At Bolle we give extra attention to details and technology while creating our frames, in order to ensure you get the most comfortable and reliable eyewear for your active life.

(ADJUSTABILITY + FIT + GRIP)

PERFECT COMFORT

LIGHTWEIGHT

ADJUSTABLE TEMPLES

The temples can be adjusted which offers a truly tailored fit and the ultimate in comfort.

REMOVABLE SIDE SHIELDS

Whether magnetic or mechanical, the removable side shields available on Graphite & Cobalt models offer extra side protection from sunlight in extreme conditions.

NYLON FRAMES

Bolle® uses only the finest grade nylon, resulting in frames that are exceedingly strong, yet lightweight and flexible. No matter how tough the competition, these sunglasses can take it.

ADJUSTABLE NOSEPIECE

The shape and angle of the multi-plane nosepiece can be adjusted to accommodate any nose bridge for a truly custom fit.

NOSE PADS: The hypoallergenic and durable nose pads can be tailored for a custom fit, giving you additional control and comfort.

INTERCHANGEABLE LENSES

Bolle® helps you stay on top of your game with this interchangeable lens system. By giving you the flexibility to match the lens to the condition, this system ensures optimum performance for any condition.

WHAT IS B-THIN ACTIVE DESIGN TECHNOLOGY ABOUT?

Software using the most advanced calculations is used to create customized lenses and the ultimate in lightweight products. Every prescription is reassessed to compensate for optical distortions related to the frame wrap angle. When the prescription reaches the limits of the conventional digital surfacing method, our patented algorithm calculates the best lens geometry regarding the optical area, the transition zone and reduces the edge thickness (US patent number 8,002,404). Every product is customized to the prescription, frame and wearer's facial metrics, ensuring optimum precision, comfort and frame balance for sports sunglasses.

SPORT PROTECTIVE

SAFETY MATTERS AT EVERY LEVEL

OUR EYEWEAR PERFORMS AT THE HIGHEST LEVEL OF PROTECTION IN SPORTS

SAFETY EYEWEAR IS GOVERNED BY SPECIFIC STANDARDS AND BOLLE SPORT PROTECTIVE GOT THEM ALL.

CE Marking is a manufacturer's declaration that the product complies with the essential requirements of the relevant European health, safety and environmental protection legislation.

EN 166

This European Standard is applicable to all types of individual eye protectors used against various dangers which may damage the eye.

ANSI Z87.1

Bolle Sport Protective meets and exceeds the high impact-resistance standards of the American National Standards Institute (ANSI) for occupational and Educational Personal Eye and Face Protection Devices.

ASTM F803-11

Our equipment for youths and adults comply with the only standard dedicated to eyewear in sports: ASTM F803-11. To pass the high-velocity impact resistance test, our eyewear must withstand the impact of different sport balls (squash, tennis, badminton, handball, football and basketball) fired at 144 km/h. Other criteria are tested: Optical Performance, UV Filtration, Refractive tolerances, Power imbalance and Prism deviation.

All Sport Protective products are "Verified as Tested for Squash", having undergone the necessary testing and being passed as suitable for squash by National Standards Association for Racket Sport Eye Protection.

Baller, Field, Playoff and League models are certified for the players of pelota or pelotari.

SHOCK

SHOCK

SHOCK

SHOCK ABSORPTION SYSTEM

BRINGS HIGH-IMPACT RESISTANCE

A revolutionary industrial process that allows two different materials to be co-injected at the same time: hard material for impact resistance and very soft material for impact absorption. This process does not use chemical bonding agents, greatly reducing the risk of allergic reactions and avoiding the possibility of heat-induced separation of components. This process also offers a very high level of durability.

STRAP SYSTEM

PROVIDES BETTER MAINTENANCE

Our innovative Click & Twist System wraps the frame securely and comfortably around your face to facilitate peak performance.

AVAILABLE WITH AIRFLOW TECHNOLOGY

PREVENTS FOGGING

Engineered venting systems promote directional airflow across the inside surface of the lens, reducing the potential for moisture build-up and maintaining perfect vision for you.

LOCK SYSTEM

SECURE FRAME CONSTRUCTION

Ensures strong assembly of the equipment, reinforcing protection in case of a violent impact.

THE PERFECT LENSES

POLYCARBONATE HIGH-IMPACT RESISTANCE LENSES

All Sport Protective lenses are made of an extremely high-impact-resistant material. The polycarbonate is a natural UV filter, blocking over 99 percent of the UV and its light weight adds comfort to your sports equipment.

AVAILABLE WITH ANTIFOG PROTECTION

Superior anti-fog and scratch-resistant technology, used in industrial and military environments. This permanent coating makes the lens highly scratch-resistant and durably delays the appearance of fogging. Available with all our lenses.

AVAILABLE WITH PHOTOCHROMIC PROTECTION

The photochromic lens works on a molecular level to lighten and darken, giving you optimal light transmission and adaptation to any environment. From Category 0 to 3. Available with a flash mirror.

FLASH MIRROR COATING

Improve your look and your vision with a flash mirror lens. The mirror look ups your style whilst enhancing filtration.

AVAILABLE IN PRESCRIPTION

Our RX laboratories are the only official laboratories able to provide authentic, certified equipment, under ANSI & EN166 standards.

CYCLING 2020

FOR SPORT, FOR LIFE.

FOR SPORT, FOR LIFE.

#FORSPORTFORLIFE

1888.

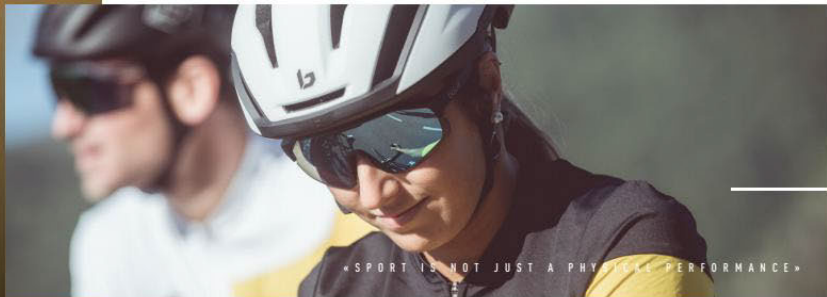

In France's Jura region, a small company was taking its first steps towards establishing what would become a leading brand in outdoor and winter sports gear. From combis to eyewear, and then pioneering in the ski goggle business, Bollé continues to equip the most accomplished athletes who have come to rely on the style and performance of the brand's products.

Bollé's know-how covers a wide variety of sports (alpine skiing, cycling, golf, sailing...) and the brand's expertise has marked the industry's history with several revolutionary patents. As a key benchmark in the eyewear industry for the quality and the performance of its products, Bollé's skill was first and foremost to

master the design not only for sunglasses, but for iconic eyewear.

From the ground up, Séraphin Bollé and then Georges Bollé created unforgettable lifestyle sunglasses designs such as the famous cat-eye nylon model, a must-have accessory for top celebrities of the period. 150 years of craftsmanship and trendsetting have given Bollé its enviable position today. The brand's inspiration and history shine through today's summer and winter collections, along with a tenacity that has helped it rise step-by-step with unerring commitment to innovation, creativity and quality.

HELMETS

BOLLÉ RESEARCH & DEVELOPMENT

HIGH PERFORMANCE CYCLING

Furo MIPS has been designed and developed to meet even the toughest rider's expectations. Attention to detail, optimized internal channeling, and best-in-class head protection solutions result in a unique cycling helmet with great ventilation and style.

OPTI-DOCK

Given Bollé's history of designing and developing eyewear it felt only right to have a dedicated place to stow eyewear in our helmets. Bollé's Opti-Dock storage system provides dedicated place to securely stow your eyewear.

OPTIMIZED VENTILATION

Bollé's new Furo and Exo helmets have been designed and developed for optimal ventilation. Deep channeling combined with large intake and exhaust ports optimize airflow and enhance ventilation.

HIGH TECH SAFETY

Equipped with MIPS technology, FURO, EXO & TRACKDOWN are the most advanced helmets we have developed yet. Allowing more protection to the brain on angled impacts, MIPS technology is today recognized for its safety features in the cycling world.

AUTOMOTIVE INSPIRED DESIGN

Speed, aerodynamicism, safety, performance: all criteria taken into account by automakers to develop their best cars. And we thought: "Why not us?"

Our new road cycling helmets have been designed and developed according to these positions. Using the car industry as our inspiration, we have adapted car components to our helmets.

The result is the best combination of style and performance, for your daily rides.

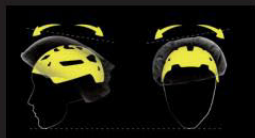

BOLLÉ DESIGN & ENGINEERING LAB

Bollé's inhouse industrial design and engineering team develop helmets and eyewear using a variety of tools. Sculpting forms by hand and on the computer allows Bollé to prototype helmets and eyewear inhouse using state-of-the-art 3D printers. Impact testing helps us to improve our development and produce safe helmets.

MIPS TECHNOLOGY

MULTI-DIRECTIONAL IMPACT
PROTECTION SYSTEMMIPS ADDS MORE
PROTECTION AGAINST
ROTATIONAL MOTION

MIPS is a revolutionary technology that lets the helmet slide relative to the head, adding more protection against rotational motion to the brain caused by angled impacts. Because keeping you safe in every condition is our priority, FURIO, EXO, & TRACKDOWN models feature the MIPS technology.

■ ■ ■ ■ ■ STRAIN LEVEL ■ ■ ■ ■ ■

■ = THE MORE RED THE MORE STRAIN

This simulation illustrates strain in the brain from a similar angled impact when the user is wearing a helmet without MIPS and a helmet with MIPS.

AVAILABLE WITH MIPS

FURIO MIPS p.16

EXO MIPS p.17

TRACKDOWN MIPS p.25

HI-VIS TECHNOLOGY

SAFETY BY NIGHT

AVAILABLE ON MESSENGER PREMIUM

REFLECTIVE
ELEMENTS
FOR NIGHT
RIDES

The risk of being hit by a car is doubled in the dark. Wearing reflective materials halves that risk. The Hi-Vis technology available on Messenger Premium features reflective materials that improve your safety in traffic, especially when the visibility is poor.

AVID PROGRESSIVE EPS TECHNOLOGY

MAXIMUM VENTILATION
WITH HIGH PROTECTION

To create helmets that perform against all types of impacts, the details are key. High-density EPS ensures that high energy impacts are effectively absorbed.

Low-density EPS, however, provides superior performance against less severe impacts. Bellé helmets with AVID liner technology use a combination of different EPS densities and/or optimization of the ventilation channels to virtually decrease the density in the upper area. The result is a lighter, better-ventilated helmet with progressive shock absorption that will absorb a wider range of impacts*.

(Available on the Trackdown model)

*Compared to a standard EPS liner with uniform thickness.

A MIX OF ACTUAL AND VIRTUALLY DIFFERENT DENSITIES EFFECTIVELY MANAGES DIFFERENT KINDS OF IMPACTS

FAST ...

Furo Mica is Bolle's pinnacle performance road cycling helmet. Design work on aerodynamics and ventilation and airflow testing, all inspired by the automotive industry, laid the foundation for Furo Mica. Also paired with innovative solutions on the comfort side, this helmet is packed with features designed to enhance your performance on the road.

bolle

NACA DUCT

Originally developed for aerospace, this submerged inlet provides less drag for better aerodynamics. It increases airflow inside the helmet, bringing a higher level of ventilation.

KAMM TAIL

The abrupt rear cut-off delivers a smaller wake that reduces drag and so improves aerodynamics.

WIND SHELLS

The wind shells make your helmet more aerodynamic, while bringing extra protection during bad weather.

... AND FURO!

OPTI-DOCK

With Bolle's history of designing and developing eyewear it felt only right to have a dedicated place to stow your eyewear in the FURO. Bolle's Opti-Dock storage system is a dedicated place to securely stow your eyewear.

360° INTEGRATED MIPS

A homogeneous system works better than two independent parts. Hence our decision to combine the Mips Low Friction Layer and our helmet Fit System. The result is a seamless, lighter look inside the helmet, thus providing great fit & comfort for the longest rides.

ROLL CAGE

Mostly seen on racing cars, the roll cage is a specially engineered and constructed frame built into the vehicle compartment to protect from injuries in case of a rollover. Using this principle, we decided to adapt the roll cage to our helmet construction. The roll cage reinforces the helmet, allowing the creation of huge vents to increase airflow.

MTB HELMETS

FOR SPORT, FOR LIFE

TO GO FASTER,
FURTHER,
ALWAYS
AHEAD OF THE
GAME

THE BEST IN MTB SAFETY

TRACKDOWN is an all-mountain helmet designed to perform on any trail. The helmet features a deep coverage at the rear, the Ballé Eyewear Storage to store your sunglasses, Vent caps to protect from bad weather conditions, and a 3-position visor allowing space for goggles. If you're looking for style and comfort on the tracks, the TRACKDOWN is the ultimate gear to wear.

GREAT PROTECTION

Deep coverage to protect you in all conditions, whether you are climbing up or riding down the hill.

ADJUSTABLE VISOR

With 3 positions, the adjustable visor adapts to all ride conditions, and means your goggles can sit on your forehead.

OPTI-DOCK

TRACKDOWN is equipped with the specific Opti-Dock storage system designed to hold a pair of sunglasses, ideal when you need to give your eyes a rest.

VENT CAPS

Plug them in and stay dry!
The vent caps efficiently block off wind and rain for the wettest outings.

SUNGLASSES

IT'S PROOF OF
OUR TENACITY,
COMMITMENT,
AND PANACHE

WHAT IS PHANTOM ?

The Phantom lens is a combination of 3 advanced technologies that revolutionize how you see your environment. Made with NXT® material for enhanced definition and a molecular photochromic filter that adapts to all light conditions. Also, a high-contrast filter improves color and depth perception.

DEVELOPED IN PARTNERSHIP WITH

MADE WITH NXT® MATERIAL

OPTICAL CLARITY

Whether you are on a bike, a slope or out in the country, perfect vision is crucial if you are to perform at your very best. With optical clarity close to that of a mineral lens, our NXT® lenses considerably improve your vision acuity, thus improving hand-eye coordination and intricate motorskills.

This enables athletes at every level to employ the technology required to beat the competition.

HIGH IMPACT RESISTANCE

NXT® lenses not only protect you 100% from harmful UV rays, but are also built for maximum impact resistance. NXT® is one of the strongest materials on the market. Originally adapted from military use - jet canopies and helicopter windshields - lenses are subjected to rigorous high-velocity impact tests.

LIGHTWEIGHT

NXT® material is close to the lightest lens material available today: at 14% lighter than polycarbonate. This allows for larger designs with fuller coverage, ultimate protection and utmost comfort.

AVAILABLE IN PRESCRIPTION

Because everyone's vision is unique, our NXT® lenses are available with our Bi-Thin Technology, suitable for 99% of prescriptions.

FRAME TECHNOLOGY

Wearing Bolle's ultimate lenses is key to enhance your vision of the world, yet it is not enough.

At Bolle we give extra attention to details and technology while creating our frames, in order to ensure you get the most comfortable and reliable eyewear for your active life.

(ADJUSTABILITY + FIT + GRIP)

= PERFECT COMFORT

LIGHTWEIGHT

ADJUSTABLE TEMPLES

The temples can be adjusted which offers a truly tailored fit and the ultimate in comfort.

NYLON FRAMES

Bolle® uses only the finest grade nylon, resulting in frames that are exceedingly strong, yet lightweight and flexible. No matter how tough the competition, these sunglasses can take it.

REMOVABLE SIDE SHIELDS

Whether magnetic or mechanical, the removable side shields available on Graphite & Cobalt models offer extra side protection from sunlight in extreme conditions.

INTERCHANGEABLE LENSES

Bolle® helps you stay on top of your game with this interchangeable lens system. By giving you the flexibility to match the lens to the condition, this system ensures optimum performance for any condition.

ADJUSTABLE NOSEPIECE

The shape and angle of the multi-plane nosepiece can be adjusted to accommodate any nose bridge for a truly custom fit.

NOSE PADS: The hypoallergenic and durable nose pads can be tailored for a custom fit, giving you additional control and comfort.

INTRODUCTION

Established in 1888, Bolle has earned a strong recognition in the sports community and all over the globe. This 150 years long success is the result of in-depth work based on an undiminished commitment to innovation and quality. Today, Bolle helmets & goggles are acknowledged for advanced technologies and comfort; always serving protection for athletes and improving performance. From materials to finish, no detail has been left to chance and each product has been developed to deliver comfort and quality in all circumstances. For 2019, Bolle charts its course through innovative solutions like the Phantom technology. This leading-edge optical system is the best lens solution for champions, as well as passionate snow sports enthusiasts; those who desire to always push their limits. No matter the level of skill and the discipline, Bolle has imagined a unique product, always adapted to your needs.

Bolle's mission is to provide solutions perfectly matched to the effort and concentration, and to assist in your quest for success.

REVEAL THE INVISIBLE

PHANTOM
LIGHT ADAPTIVE LENS TECHNOLOGY

Improved vision = improved confidence. Phantom lens technology

- developed in partnership with Essilor® Sun Solution™ - redefines how you see on the snow.

Industry leading optical clarity & light-adaptive lens allow you to reveal the invisible.

HELMET: Insect Hips
GOGGLES: Nevada Phantom

G O G G L E S

by *bolle*

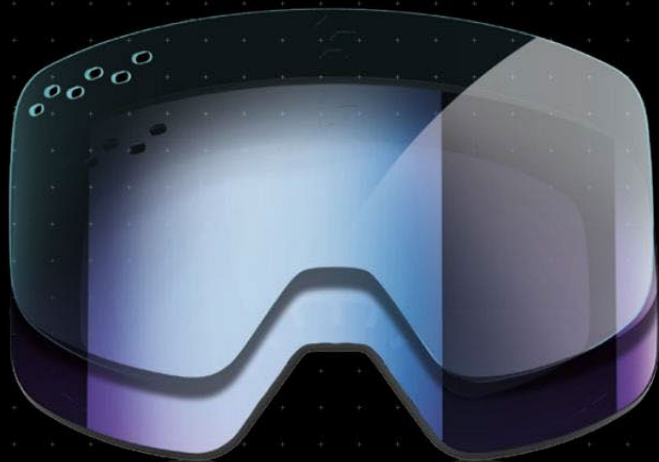

WHAT IS PHANTOM ?

Phantom lens is a combination of 3 advanced technologies that revolutionizes vision on snow. Made with NXT⁺ material to deliver greater definition. Molecular photochromic filter adapting to any light condition.

LTS technology (Low Temperature Sensitivity) ensuring a high photochromic performance even in low temperatures.

A 4th technology is also available on our ultimate Phantom+ lens: a semi-polarized film reducing distracting glare and enhancing contrast to distinguish ice from snow (available only on Phantom+).

Developed in partnership with

OPTICAL CLARITY

Made with NXT⁺ material to deliver greater definition

- Optimal clarity • Lightweight • High impact resistance
- Chemical resistance • UVA/UVB Protection

0% of activation

PHOTOCHROMIC PERFORMANCE

Phantom lens technology achieves a wide range visible light transmission, ensuring precise visual acuity in all weather conditions, including the most extreme. Our lens test reaches 70% of its full activation within 20 seconds.

-25°C ▶ 5°C

STABILITY

Bolle has advanced the performance of photochromic technology to an entirely new level. The Phantom lens with exclusive LTS Technology (Low Temperature Sensitivity), delivers improved activation, darkening or lightening whether the temperature is -25°C or 5°C.

100% polarized lens//
blocking all reflections,
making the terrain hard to read.

50% polarized lens//
still blocking reflections yet accepting
enough light to see clearly what's ahead.

PHANTOM+
LIGHT ADAPTIVE LENS TECHNOLOGY

VISION ENHANCEMENT

Because it was not enough, we have added to our Phantom lens a semi-polarized film (50% polarization), becoming Phantom+.

When a 100% polarized lens fully blocks all reflections caused by the sun on snow, the Bolle 50% polarized film works like a moderately dense net that reduces distracting glare while getting enough light transmission through the lens in order to distinguish ice from snow. Phantom+ equipped with this technology offers an optimized reading of the terrain while reducing eye fatigue.

LENS TINTS

by bolle

Bolle lens technology uses 5 different lens base tints to provide a wider range of light conditions, ensuring optimal visual clarity at all times.

EQUALIZER®

COMBAT OPTICAL DISTORTION

As altitude increases, atmospheric pressure decreases, which potentially results in optical distortion. This effect is even more enhanced when you are using spherical lenses. This is the main reason why we have developed many years ago our own solution to combat optical distortion: Equalizer®

OUR SOLUTION

With a strategically-located breathable insert between the inner and the outer lens, Equalizer® regulates atmospheric pressure in our spherical lenses.

The Equalizer® air is made out of Gore-Tex in order to be breathable. With this technology on board, you'll experience optimal vision at any time. Available on all spherical adult goggles.

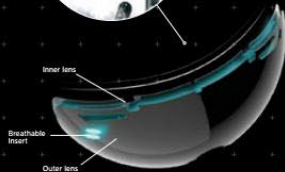

SPHERICAL DOUBLE LENS WITHOUT EQUALIZER®

LOW ATMOSPHERIC PRESSURE CAN WARP YOUR INNER LENS, CREATING OPTICAL DISTORTION

SPHERICAL DOUBLE LENS WITH EQUALIZER®

AIR PRESSURE STAYS UNIFORM, DELIVERING OPTIMAL VISION

bolle

SPORT OPTICAL SYSTEM®

SNAP-IN SOLUTION FOR PRESCRIPTION USERS

The Bolle SOS prescription adapters easily snap into place to provide the corrective vision required while maintaining a wide field of view.

FOR ADULTS

No need to wear your prescription glasses anymore, our solution offers the best comfort for your eyes all day long.

S0617 SOS Adult optical clip

FOR CHILDREN

Our prescription adapter is also available for children, and can be adapted to all our junior goggles, except INUK.

S0174 SOS Junior optical clip (only for Royal, Rocker Plus, Rocker)

Fits perfectly — Maintains a wide field of view

bolle

GOGGLE TECHNOLOGIES

THE SAME LEVEL OF ATTENTION IS BROUGHT TO OUR ENTIRE RANGE OF GOGGLES. FIND BELOW ALL OF THE OTHER ADVANCED TECHNOLOGIES FEATURED ON OUR PRODUCTS.

**P-80+
ANTI-FOG**

Embedded premium Anti-fog layer in the inner lens disperses water molecules across the surface of the lens, preventing moisture build up that can impede your crystal clear view of the terrain ahead. Available on all our goggles.

**CARBO GLAS®
ANTI-SCRATCH**

A high-tech protective armor applied to the outer lens creates a shield to significantly reduce scratching, keeping your lenses and outlook as clear as a bluebird sky.

**DOUBLE
LENS**

Creation of a dual-pane thermal barrier between the cold dry outside air and the moisture generated by intense activity prevents distracting condensation from forming.

**UV
PROTECTION**

All Bolle® lenses block harmful UVA/UVB rays up to 400 nanometers.

**FLOW-TECH™
VENTING**

Engineered venting systems in each frame promote directional airflow across the inside surface of the lens, reducing the potential for moisture build up and maintaining your pristine vision.

**FORESTAY™
SYSTEM**

Outrigger systems are designed for goggles to sit snugly on your face, while allowing the strap to interact independently with the latest helmet designs for an integrated fit.

**GOGGLE / HELMET
INTEGRATION**

Bolle® helmets and goggles are designed in parallel to ensure perfect fit, optimal ventilation and best-possible comfort.

**SILICONISED
STRAP**

The silicised strap helps provide total support for the goggle on the helmet.

ULTIMATE GOGGLES

VIRTUOSE
TSAR
NORTHSTAR
LAIKA

PHANTOM

Improved vision = improved confidence. Phantom lens technology - developed in partnership with Essilor® Sun Solutions™ - redefines how you see on the snow. Industry leading optical clarity & light-adaptive lens allow you to reveal the invisible.

EQUALIZER® TECHNOLOGY

Experience optimal vision with the Equalizer® technology, a specific breathable insert which regulates the atmospheric pressure in between the lenses, to avoid optical distortion.

TRIPLE DENSITY FOAM

The only material that touches your face is an ultra-soft layer of polar fleece. Two progressively denser layers of foam ensure an always secure and comfortable fit.

WIDE FIELD OF VIEW

Our spherical lenses ensure maximum peripheral vision, a requirement in the slalom gates or to read the terrain before dropping.

1-CLICK INTUITIVE INTERCHANGEABLE SYSTEM

MOVE FASTER THAN THE WEATHER

With its 1-click interchangeable lens system, switching lenses is a child's play. VIRTUOSE has been designed to meet the toughest riders' expectations. As weather changes rapidly in the mountains, you have to act fast to always see clearly what's coming ahead. Thanks to VIRTUOSE easy interchangeable lens system, you'll get the right lens at the right time.

1-CLICK INTUITIVE INTERCHANGEABLE SYSTEM

- 1 Remove the lenses as fast as the weather changes.
- 2 Easily replace the lens and ride as though nothing has happened.

FIT: MEDIUM / LARGE

VIRTUOSE

The right lens at the right time. With the Bolle 1-click interchangeable system, switch your lenses even faster than the weather changes with the VIRTUOSE goggles.

BOLLE RESEARCH & DEVELOPMENT

HIGH PERFORMANCE SKI HELMET

Bolle is proud to introduce our newest ski visor helmet: V-LINE CARBON. Being one of the leaders in the visor segment, we put all our efforts to create a new helmet synonym of performance and elegance. Attention to detail, optimized ventilation, photochromic visor, and best-in-class head protection solutions result in a unique visor helmet with great vision and style.

HIGH QUALITY MATERIALS

Using carbon material in our helmets ensures maximum protection for our users and a touch of inimitable aesthetic.

AVID PROGRESSIVE EPS

Our freeride helmets include AVID Progressive EPS technology, bringing a higher level of protection against a wider range of impacts.

ONEPIECE FIT

Our helmets are designed to fit perfectly with our goggle range, with simple yet progressive features to never bother about your gear.

BOLLÉ DESIGN & ENGINEERING LAB

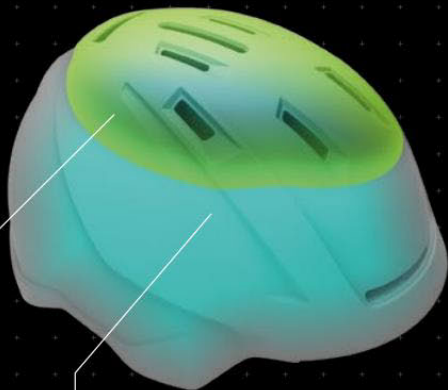

Bolle's inhouse industrial design and engineering team develop helmets and eyewear using a variety of tools. Sculpting forms by hand and on the computer allows Bolle to prototype helmets and eyewear inhouse using state-of-the-art 3D printers. Impact testing helps us to improve our development and produce safe helmets.

AVID PROGRESSIVE EPS

Creating helmets that perform in all types of collision requires getting the details exactly right. This is why Ball® Research & Development team has developed a technology bringing ultimate protection to your head in every type of impact situation.

SHOCK ABSORPTION

We observed that the density of EPS had a consequence on its protection efficiency when it came to shock absorption. Some densities are optimized for one type of impacts, but bad at another.

LOW DENSITY

Absorbs low energy impacts
Bottoms out in big impacts

HIGH DENSITY

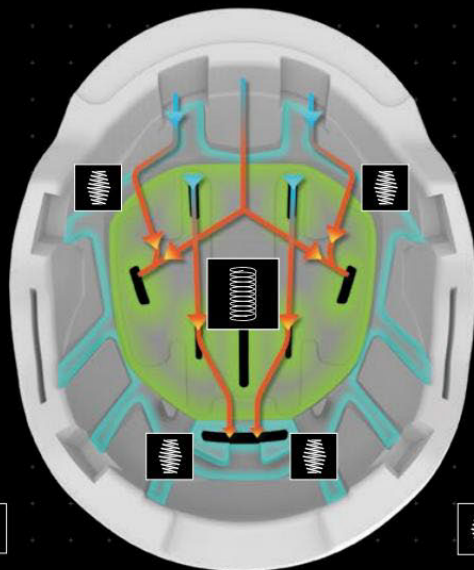

Absorbs high energy impacts
Does not compress in small impacts

Using high density EPS ensures high energy impacts are effectively absorbed. Low density EPS however, provides superior performance in small to medium energy impacts. Ball® helmets with the AVID Progressive technology combines high density EPS in the main structure with a low density EPS inner insert, providing more protection in a wider range of impact situations.

VENTILATION

The combination of materials is also optimized with interior ventilation channels that virtually decrease density without compromising the ability to provide protection from big hits, in addition to providing excellent airflow. The result is a lighter, more comfortable helmet with superior performance for the full range of impacts.

LOW DENSITY FOAM

Optimum absorption at medium impact energy, may compress completely in high energy impacts

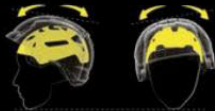

HIGH DENSITY FOAM

Incomplete compression at low impact energy, optimum absorption at high impact energy

VENTILATION
CHANNELS WHICH VIRTUALLY DECREASE DENSITY

MIPS TECHNOLOGY

MULTI-DIRECTIONAL IMPACT
PROTECTION SYSTEM

MIPS ADDS MORE
PROTECTION AGAINST
ROTATIONAL MOTION

■ = THE MORE RED THE MORE STRAIN

MIPS is a revolutionary technology that lets the helmet slide relative to the head, adding more protection against rotational motion to the brain caused by angled impacts. Because keeping you safe in every condition is our priority.

This simulation illustrates strain in the brain from a similar angled impact when the user is wearing a helmet without MIPS and a helmet with MIPS.

SHELL CONSTRUCTION

For helmets, getting it right in terms of construction techniques and proper ventilation can make all the difference. That's why bolle helmets are designed from the ground up for all personal preferences and performance objectives.

INJECTED ABS

ABS injection technology guarantees solid resistance and high capacity shock absorption, providing more robust structure.

IN-MOLD CONSTRUCTION

In-Mold construction molds the foam liner into a thin polycarbonate shell, creating lightweight and efficient protection for your head.

HYBRID SHELL

The right material in the right place:

- ABS shell on the top for toughness and penetration protection.
 - In-mold design on the lower portion for weight reduction and style.
- Bolle® Hybrid shell construction synergizes the key features and benefits of In-mold and ABS shell technologies.

HELMET TECHNOLOGIES

360°
FIT SYSTEM

BOA®

Engineered to push performance further, the Boa® Fit System is a 360° fit system providing micro-adjustability for fully customized comfort and unmatched stability. Dial in your perfect fit, stay in the moment and ride with comfort with Boa®. Available on helmet only.

AIR EXTRACTOR

Venting holes provide constant air circulation. Cool air comes in from the front and extracts hot air at the back in order to keep your head just at the right temperature in any condition.

ADJUSTABLE VENTILATION

The adjustable ventilation system is easy to use and enables you to control the amount of air coming in for maximized comfort.

INTEGRATED VENTILATION

Openings at strategic points on the helmet ensure constant airflow inside.

CLICK-TO-FIT™ SYSTEM

Our Click-To-Fit™ system allows you to fine tune the fit of your helmet easily and quickly. Our rubberized adjustment wheel lets you tighten or loosen the helmet effortlessly, even with your gloves on!

DETACHABLE LINING

Most Boa® helmets feature detachable and washable inner lining.

REMOVABLE EARPADS

Designed to be comfortable and warm, while still allowing you to hear clearly, Helmet ear pads can be removed for washing.

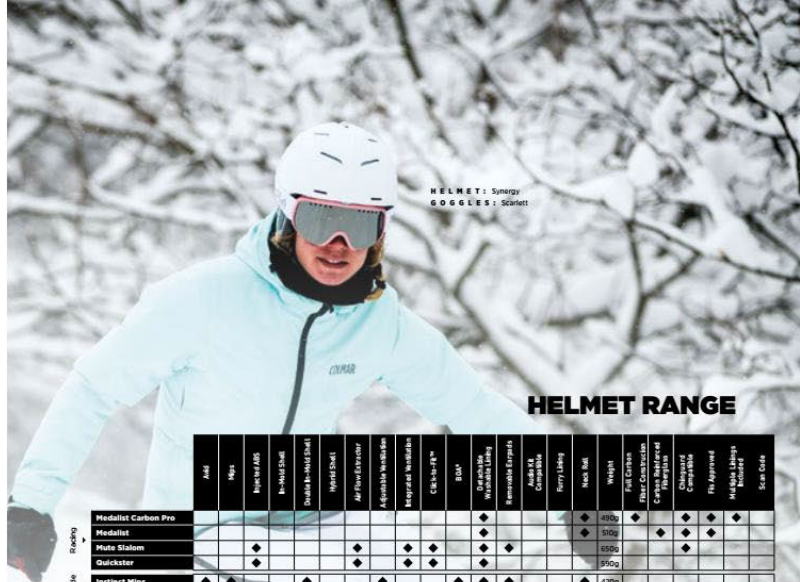

AUDIO KIT

Our audio kit system offers great stereo sound with a volume dial for quick and simple sound control. Super thin speakers are inserted directly into Boa® earpads so you can't lose them. *Audio kit sold separately.

PERFECT GOGGLE / HELMET INTEGRATION

Boa® helmets and goggles are designed in parallel to ensure perfect fit, optimal ventilation and best-possible comfort.

**FLAT ZONE**

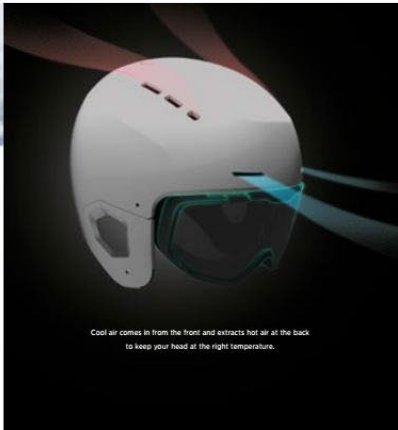

A flat zone has been designed to prevent slipping when the goggles sit on the forehead.

LENS HEIGHT

Lens height has been increased to avoid the gap between the helmet and the goggles, ensuring a perfect fit.

ONEPIECE FIT

Our experience of developing kids helmets and goggles led us to create QUIZ helmet and ROCKET goggles in order to enhance our kids' experience on snow. Kids often experience the issue of having a gap between their helmet and goggles on the forehead zone, because both products do not offer the correct fit. Based on this evidence, we have developed a helmet with simple yet progressive features to eliminate this issue, and allow our children to enjoy their ski day in total safety and with comfort.

Cool air comes in from the front and extracts hot air at the back to keep your head at the right temperature.

SIZES: FROM 48 TO 55 CM

QUIZ

Our most robust helmet for kids is a great choice for fearless youths. The durable and tough ABS hard shell sits on top of an EPS liner to provide good protection against impacts and sharp objects. HIGH MOUNTAIN LENSES

Specially developed for high-altitude use, the Bolle 100 Gun lens offers Cat.4 protection, eliminating distracting glare. By filtering 98% of visible light and amplifying color contrast, it delivers better vision in the snow. Take a moment to admire the view on top of the world with GRAPHITE.

ON TOP OF PERFORMANCE

The new must-have item on your next expedition check list, GRAPHITE is the definition of Bolle's vision about mountaineering sunglasses. Ideal for medium to large faces, they adapt to any weather conditions thanks to their magnetic & removable side shields. Also available with Bolle's cutting-edge lens technology Phantom, this model can be summarized in 3 words: light-weight, technical, high-protection.

HYBRID STYLE

Whether you are ski-touring or hanging out with friends in the city, COBALT is the perfect accessory combining style and performance.

GREAT SIDE PROTECTION

Injected and vented side shields protect your eyes during high-intensity mountain activities. Just clip them out at the end of the day and get into urban style made with your friends.

PURE HERITAGE

True to Bolle's heritage, COBALT's design takes inspiration from vintage mountaineering sunglasses while offering a very modern look with sharp edges and premium finishing such as its metal bar and shield design. To offer perfect protection in the mountain's extreme environment, COBALT benefits from removable injected side shields to protect you from distracting sun reflections, and is also available with Bolle cutting-edge Phantom lens technology.

FIT: LARGE • BASE 61/43/17/16

GRAPHITE

Bolle brings mountaineering back to the range. Go beyond your limits with GRAPHITE and reach new heights. Ergonomy, ventilation, protection, this glacier style has all it takes to endure the most extreme experiences without any compromise.

The advertisement is split into two main visual sections. On the left, a vertical panel shows a complex industrial structure with a large, circular skylight at the top, set against a teal-tinted background. On the right, a larger panel features a close-up portrait of a man with dark hair and a light beard, wearing clear safety glasses. He is looking directly at the camera with a neutral expression. The background behind him is a blurred industrial setting.

bolle
SAFETY

***FOR THE SAFETY OF YOUR EYES
OUR VISION HAS NO LIMITS***

INNOVATIVE VISION

Technical performance above and beyond standard:

Improved frame ergonomics, innovative glass coatings. We develop new technologies and offer increasingly high-performance protection, providing more comfort and greater safety. To the point where some products exceed the required standards.

Design which defies limitations:

Technical constraints for safety glasses should not restrict their design. We believe that their look is essential to make people want to wear them and, by combining advanced technology with aesthetics, our imagination has no limits.

Commitment which exceeds expectations:

Offering customized protection, providing tailored solutions to complex specifications, adapting to the specific constraints of each market, reacting quickly to new requirements. Every day, we push beyond our boundaries to satisfy customers.

A presence beyond borders:

We are developing in new areas around the world. In Africa and Asia, we are providing populations with high-performance protection adapted to their shape. Truly a global brand, Bollé Safety protects the vision of workers around the world.

A woman in a blue jumpsuit and safety glasses stands in a quarry. In the background, there is a large excavator and a pile of rocks under a blue sky with some clouds.

1888

Bollé was founded in Oyonnax. The company specialized in the manufacture of hair combs and accessories in horn and boxwood.

1936

Manufacture of celluloid then celluloid acetate sunglasses and glass frames.

1946

A pioneer of molded nylon, Bollé innovated to create products that met the strictest standards of the time.

1950

Bollé created the first series of protective goggles and eyewear.

1960

Bollé set off on its sporting adventure with the first glasses designed for skiers. At the same time, the Industrial Safety department was founded and worked with the French Army, French Navy and Aerospace Department.

2004

Bollé positioned itself as the eye safety specialist and developed its European distribution network with key partners.

2018

Creation of Bollé Brands: gathering the Bollé, Bollé Safety, Cébé and Serengeti brands and covering a wide range of products with a high level of protection, performance, innovation and style.

Ever since,

Bollé has been creating innovative protective eyewear. By designing and manufacturing glasses and goggles for industry and the armed forces, Bollé has become one of the leaders in this sector. Today, Bollé protective eyewear is sold and worn throughout the world.

■ **Over 130 years of expertise**, a stable and customer focused team.

■ **An international presence:** 3 subsidiaries (EMEA, APAC, USA) and a strong partnership with exclusive distributors, in particular in Canada and Russia.

■ **500 product references:** every model has a quality certificate, issued by independent laboratories and respecting the current standards.

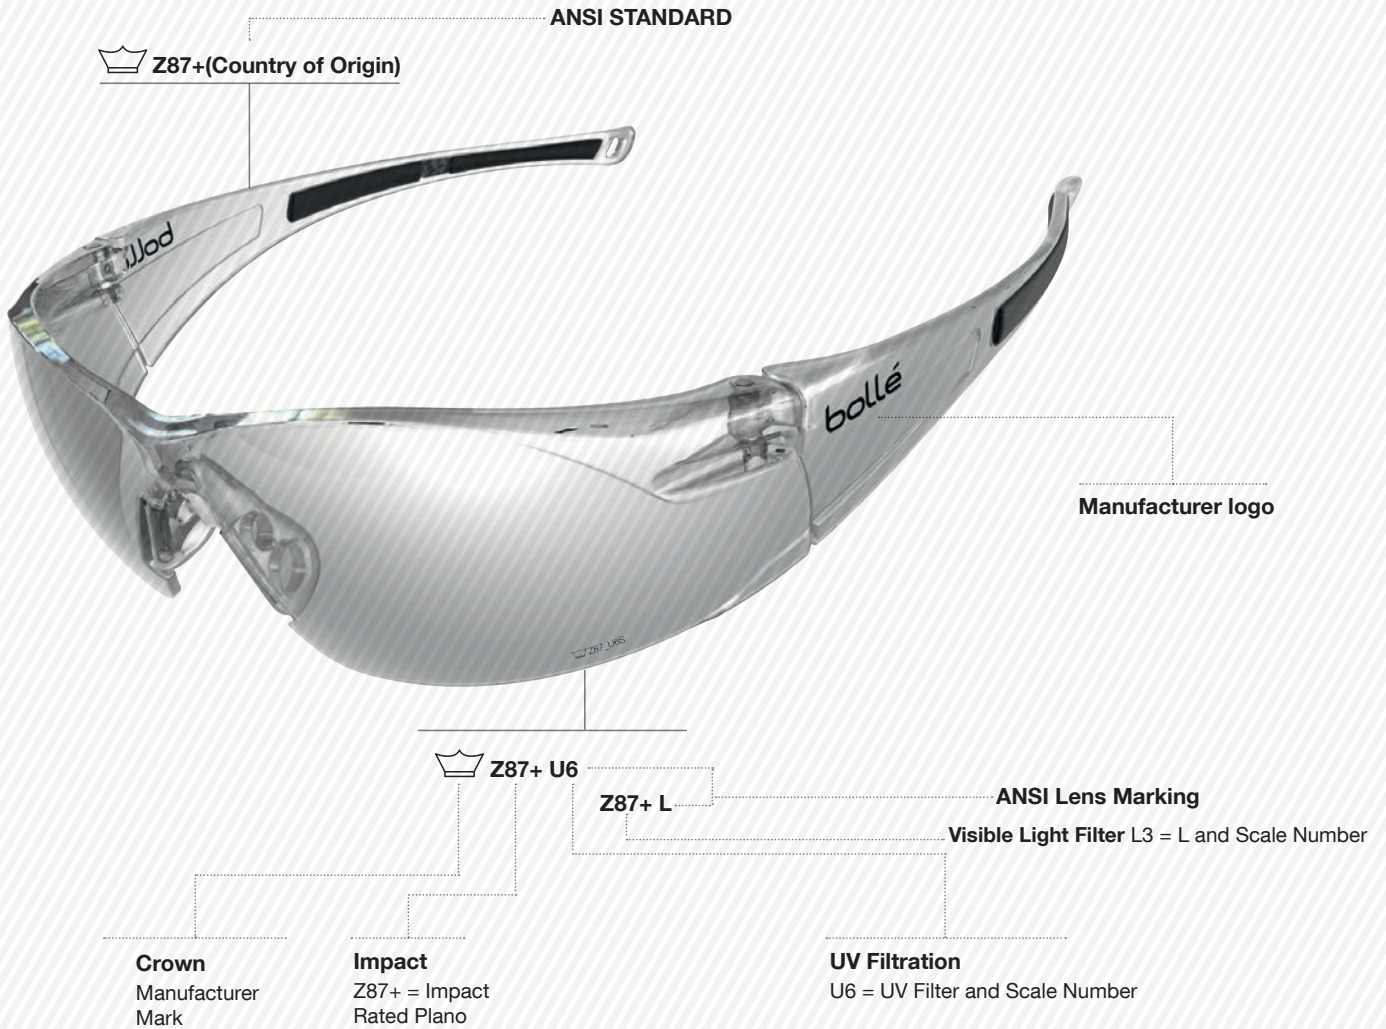

■ **4 to 5 product innovations per year.**

MANDATORY MARKINGS

Bollé Safety lens and frame markings are specific to each product. Certified by independent laboratories, this information guarantees protective eyewear quality and resistance.

ISEA/ ANSI-Z87.1-2015 STANDARDS

Bollé Safety offers a wide range of safety eyewear with optical markings specific to each risk and type of activity.

■ What is the assessment of occupational hazards?

Assessment of occupational hazards involves identifying and ranking hazards in the workplace to implement relevant protective measures. It is the initial step in occupational health and safety. It is essential to check adequacy between product markings and standards markings.

■ Brief Overview of the ANSI Z87.1-2015 Standard

The American National Standards Institute (ANSI) approved May 28, 2015 an updated edition of the ANSI/ISEA Z87.1 standard. The new edition titled, “American National Standards Institute for Occupational and Educational Personal Eye and Face Protective Devices” updates the previous version, Z87.1-2010.

■ Changes to the Standard

ANSI/ISEA Z87.1-2015 Since the 2010 revision was a dramatic shift away from product configuration requirements and toward a hazard-based structure, much of the revised language in ANSI/ISEA Z87.1-2015 reflects the effort to fine-tune this approach. Streamlined language for resolution testing provides clarity to test methods to ensure they can be accurately executed, and updated test patterns to complement the language.

(From the Foreword of ISEA/ANSI 2015 American National Standard for Occupational and Educational Personal Eye and Face Protection Devices).

A COMPLETE LINE OF LENSES

THE EYE IS AN ESSENTIAL FRAGILE ORGAN WHICH DIRECTS OUR MOVEMENTS AND GUIDES US IN OUR ENVIRONMENT.

This is why Bollé Safety has made eye safety its number one priority since 1888. Bollé Safety is constantly innovating to guarantee optimum protection for your eyes with lens coatings which filter out the harmful rays and improve your visual comfort.

*Silver, red and blue flash

■ **99%** of Bollé Safety lenses absorb UV radiation.

■ **95%** of the glasses in the line are manufactured from Polycarbonate.

Polycarbonate combines comfort and protection:

- ultra resistant (20 times more resistant than conventional mineral glass),
- ultra light (20 g on average for a single lens),
- ultra thin (2.2 mm on average).

Bollé Safety also offers mineral, acetate and CR39 lenses, mainly for the range of prescription safety glasses.

All our lenses filter 99.99% of UVA/UVB radiation.

■ **98%** of glasses have anti-scratch and anti-fog coatings.

All our new products and top products benefit from the innovative coating **PLATINUM®**

bCSP Comfort Sensitivity Perception

THE WINNING COMBINATION, IN ALL CONDITIONS!

Like ESP, this innovating coating is an effective solution for all activities that alternate exposure to bright light and low light, while also being suitable for extreme temperature environments. Ideal for cold and hot countries, from the Far East to Siberia! CSP technology to filter blue light (52%) is combined with the exclusive **PLATINUM**® coating, to sustainably combat fogging and provide permanent visual comfort from a single pair of glasses.

■ **bCSP** is available on the following models:
RUSH+, **COBRA**, **SILIUM+**, **BAXTER**, **PILOT**,
TRYON and **NESS+**.

bESP Extra Sensory Perception

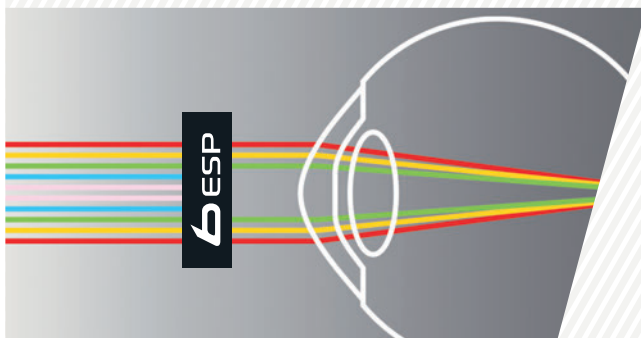

COMBATS GLARE DURING FREQUENT SWITCHES FROM INDOORS TO OUTDOORS

ESP combines the advantages of clear and tinted lenses in a single model. It reduces glare when passing from a shaded zone to a bright zone and very efficiently filters blue light.

ADVANTAGES:

- Offers a good blue light filtration (57%) / visible light transmission (64%) ratio.
- Is perfect for indoor/outdoor work.
- **bESP** is available on the **CONTOUR MÉTAL**, **CONTOUR** and **COBRA** models.

FOR OUTDOOR USE

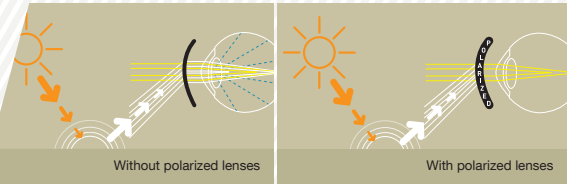

b POLARIZED

AN END TO GLARE!

POLARIZED technology is ideal for use in an urban or marine environment, for driving, and generally for all outdoor activities in which there is a high risk of glare. POLARIZED technology offers incomparable comfort by eliminating glare and reflections.

ADVANTAGES:

- Eliminates glare due to light reflection.
- Improves color perception and visual comfort.
- Improves perception of contrast and depth.
- Reduces eye strain.
- Offers perfect optical quality and 99.99% protection against UVA/UVB, solar radiation and impact. Certified ANSI-Z87.1-2015.
- **b** POLARIZED is available on the **CONTOUR, HUSTLER, SOLIS, VOODOO, LOWRIDER and SHADOW** models.

b TWILIGHT

IDEAL FOR OUTDOOR USE IN LOW LIGHT CONDITIONS

Recommended for outdoor work at dawn and at dusk, TWILIGHT is a real shield against blue light. Contrasts are accentuated for better visibility and the double **PLATINUM**® inner/outer anti-fog coating is effective even in the most extreme conditions.

ADVANTAGES:

- Improves contrast in low light.
- Absorbs blue light effectively (76%).
- Is compatible with the **PLATINUM**® coating.
- Offers perfect optical quality and 99.99% protection against UVA/UVB, solar radiation and impacts. Certified to ANSI-Z87.1-2015.
- **b** TWILIGHT is available for the **COBRA, RUSH, RUSH+, IRI-s and TRACKER** models.

FLASH

The flash lens reflects heat. Ideal for outside use in full sunshine. It can be combined with the polarized coating to further reduce harsh glare.

SMOKE

Outdoor use only. Filters UVA and UVB (99.99%). It provides the maximum protection from solar radiation.

WELDING

Protection from UV and infra-red radiation linked to certain welding activities that do not require a welding helmet.

- Shade 5 available in **OVERRIDE** and **TRACKER** models.

B HD High Definition

A REVOLUTIONARY COATING FOR EXCEPTIONAL CLARITY AND LIGHT TRANSMISSION.

The HD coating provides exceptional clarity and transmission of light with a rate of 96% compared to 92% for a conventional clear lens.

HD is reflection resistant and provides excellent visibility, it is ideal for activities that demand a high level of precision. It also has a water-repellent coating which makes it a barrier against liquid and dirt.

ADVANTAGES:

- Improves perception and clarity thanks to the exceptional visible light transmission rate (96%).
- Increases wearer acceptance rate due to greater visual comfort as compared to conventional clear lenses.
- Featuring hydrophobic technology (used by automotive suppliers), the HD coating guarantees improved visual acuity and perfect water resistance in very humid environments.
- Offers high optical quality and 99.99% UVA/UVB and impact protection. Certified to ANSI-Z87.1-2015.
- **B** HD is available on the RUSH and COBRA models.

B CONTRAST

FOR BETTER INDOOR WORKING COMFORT

The CONTRAST coating is applied as a gradient and recommended to combat aggressive artificial lighting.

Ideal for activity at a static workstation lit using neons, halogens or other sources of blue light that can adversely affect the eyes.

The CONTRAST coating protects from the harmful effects on the retina and the crystalline lens of the eye.

It reduces eye fatigue, providing optimum working comfort and improving contrast and relief.

ADVANTAGES:

- Helps to reduce heating of the cornea, a cause of conjunctivitis, thanks to the UVA/UVB absorption and mirror coating.
- Filters over 30% of blue light, which may lead to headache and eye strain.
- May delay crystalline lens aging, responsible for cataracts, thanks to its coating that reflects heat.
- Serves as a barrier to impacts and light pollution (neon and halogen light, etc.).
- Improves color perception, contrast and depth.
- **B** CONTRAST is available on the COBRA model.

CLEAR

- Indoor use.

Safety glasses with clear lenses are essential for indoor use. To increase employee compliance, Bollé Safety offers a wide range of models, all available with clear lenses.

A COMPLETE LINE OF LENSES

| Polycarbonate Lenses (PC) | Use | Compatible with PLATINUM® |
|--|---|---|

Bollé Safety offers the new, exclusive **PLATINUM®** scratch and fog resistant coating on many models (see the coating specifications for each model in your catalog).

OPTICAL REMINDER

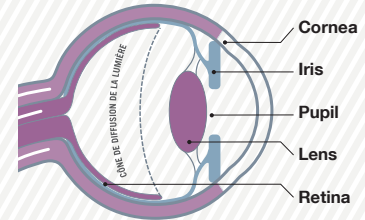

BLUE LIGHT: A POTENTIAL RISK FOR YOUR EYES

Blue light is emitted by the sun as well as LED lamps. Blue light is also found in a large number of electronic devices that are in every-day use and which can emit intense radiation.

Prolonged exposure to blue light may cause eye strain and eye fatigue with stinging eyes and headaches.

Blue light or high-energy visible light (HEV) is also 15 times more harmful for the various parts of the eye such as the crystalline lens and the retina. Blue light is the most damaging color in the visible light spectrum.

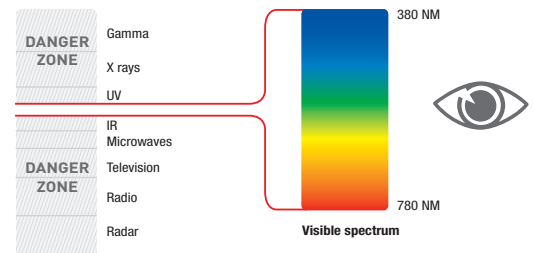

THE RISKS ASSOCIATED WITH BLUE LIGHT

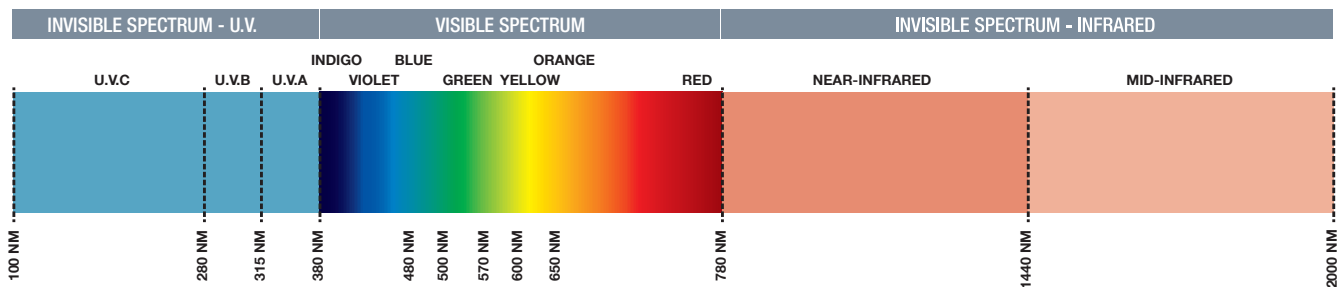

- Aggravated age-related macular degeneration (ARMD).
- Dazzle and visual discomfort (blurred vision).
- Strobe effect linked to the imperceptible fluctuating intensity of the light.
- Headaches.

THE VISIBLE LIGHT SPECTRUM

Wavelengths are the basis of how we perceive the world. Two organs receive these wavelengths: the eyes receive light and the ears receive sound.

THE VISIBLE CONSEQUENCES OF BLUE, VIOLET, ULTRA-VIOLET AND INFRA-RED RADIATION ON THE EYE

| RADIATION | ORGANS AFFECTED | LESIONS | EFFECTS ON SIGHT |
|---|---|--|---|
| <ul style="list-style-type: none"> ■ UVC 100 to 280 nm ■ UVB 280 to 315 nm ■ UVA 315 to 380 nm ■ Blue/violet light approx. 380 to 780 nm ■ Visible light 380 to 780 nm ■ Near-IR 780 to 1400 nm ■ Mid-IR 1400 to 2000 nm | <ul style="list-style-type: none"> ■ Cornea ■ Cornea and crystalline lens ■ Cornea and crystalline lens ■ Retina ■ Retina ■ Crystalline lens and retina ■ Crystalline lens | <ul style="list-style-type: none"> ■ Corneal lesions ■ Premature ageing of the crystalline lens ■ Retina photoreceptor degeneration ■ Photoreceptor trauma due to intense dazzling light ■ Macular degeneration ■ Crystalline lens opacification | <ul style="list-style-type: none"> ■ Conjunctivitis - partial blindness ■ Cataract - conjunctivitis - partial blindness ■ Cataract - conjunctivitis - partial blindness ■ Partial or total blindness ■ Sight complaints - imbalanced perception ■ Retinitis pigmentosa - cataract - blindness ■ Cataract - partial blindness |

INNOVATION

THE FOUNDATION OF OUR PRODUCTS

FLEX 160°

Soft and ultra pliable, 160° FLEX frames can be used to adjust the space between the temples for better wearer comfort.

NON-SLIP TIPGRIP

The non-slip TIPGRIP technology ensures a better fit thanks to the dual-material design and innovative shape, improving temple comfort and hold.

B FLEX

The revolutionary B-Flex technology provides unique flexibility. Light, soft and fully pliable, the B-Flex bridge is fully adjustable in all directions and perfectly fits all faces thanks to the memory-shape material.

COBRA glasses

Cobra GOGGLES

Removable temples

Foam + strap kit

REMOVABLE TEMPLES

This technology is used to quickly and easily transform safety glasses into safety goggles. The temples can be replaced with the foam + strap kit.

PIVOTING TEMPLES / TILTING FRONT

This technology is used to adapt the angle of the glasses to your face shape.

ADJUSTABLE BRIDGE

Designed to adapt to the nose so the frame sits perfectly on the face.

EEQUALIZER

EQUALIZER is the high performance goggle system to protect against fogging. Thanks to the double lens and breathable patch, the EQUALIZER filters and eliminates moisture levels in the goggles.

ANTI-FOG AND ANTI-SCRATCH PLATINUM® COATING: EVERLASTING PROTECTION

At Bollé Safety, we are convinced that **scratches and fog do not only attack specific surfaces**. This is why we decided to permanently apply the anti-scratch AND anti-fog coating to each lens surface (inside AND outside). This dipping process offers **protection which is twice as efficient** and considerably slows the appearance of fog and scratches.

BAXTER

COMFORT AND INGENUITY

BAXTER offers total comfort thanks to the wrap-around frame. With the waterproof foam and ingenious system strap attachment, BAXTER offers effective protection against sprays of solids, liquids, and against dust.

1.75 oz

- ✦ Increased protection
- ✦ Wrap-around frame
- ✦ Waterproof foam and removable strap
- ✦ PLATINUM® coating

PLATINUM®

The new exclusive scratch and fog resistant PLATINUM® coating guarantees even more safety, reliability and comfort. Wash resistant (water or soap), this permanent coating applied on both sides of the lens makes it highly scratch-resistant and durably delays the appearance of fogging.

CSP

This innovative coating is an effective solution for all activities that alternate exposure to bright light and low light, while also being suitable for extreme hot and cold temperature environments. CSP is also combined with the exclusive PLATINUM® coating that sustainably fights fogging.

COBRA

ESSENTIAL WRAP-AROUND COMFORT

The essential best seller with a panoramic visual field.

.88 oz

Wrap around and free from any visual interference the COBRA offers 180° panoramic vision and superior optical quality. The option of swapping the temples for an adjustable strap and foam kit means COBRA is a highly versatile model.

- ✦ 1 product has 2 uses
- ✦ Upper protection
- ✦ Panoramic vision
- ✦ Non-slip bridge
- ✦ Comfortable, non-slip straight temples
- ✦ Temple or strap version with interchangeable foam
- ✦ Tilting front/pivoting temples

CONTRAST

CONTRAST is recommended for protection from the effects of artificial lighting. Ideal for activity at a static workstation lit using neons, halogens or other sources of blue light that can harmfully affect the eyes.

ESP

ESP combines the advantages of clear and tinted lenses in a single model. It reduces glare when passing from a shaded zone to a bright zone and very efficiently filters blue light. Ideal for people frequently moving between indoors and outdoors.

HD

HD is reflection resistant and provides excellent visibility, it is ideal for activities that demand a high level of precision. It also has a water-repellent coating which makes it a barrier against liquid and dirt.

CSP

This innovative coating is an effective solution for all activities that alternate exposure to bright light and low light, while also being suitable for extreme hot and cold temperature environments. CSP is also combined with the exclusive PLATINUM® coating that sustainably fights fogging.

CUSTOMIZE YOUR EYEWEAR IN YOUR COMPANY BRANDING COLORS!

Bollé Safety offers you the possibility of customizing the glasses* of your choice with your corporate branding and colors. It's quick and easy. Contact one of our sales managers today.

1 Choice of model and reference

Example: COBRA - Ref. 40037

2 Send your HD logo

3 Choice of type of customization

- Branding on the lens.
Size cannot exceed 1.5cm.
Positioning differs depending on the model so as not to affect vision.
- Branding on one temple.
- Branding on the microfiber pouch or semi-rigid case.
- Temple coloring (RUSH +).

4 Choice of color

To improve the visibility of your logo, use 1-color branding in white, black or grey (Pantone® 429 or 431).

Other Pantone® colors available on request:

5 Our customers have already personalized their glasses!

*Offer valid for a minimum order of 1,200 pairs and on a selection of Bollé Safety products.

The COVERALL AUTOCLAVE goggles guarantee better protection and comfort thanks to interchangeable ventilation and the versatility of wearing them over prescription glasses.

- ✦ Liquid overflow chute
- ✦ Indirect ventilation
- ✦ High-comfort autoclavable goggles
- ✦ Fits over prescription glasses
- ✦ **PLATINUM**® coating
- ✦ Clean strap

PLATINUM®

The new exclusive scratch and fog resistant **PLATINUM**® coating guarantees even more safety, reliability and comfort. Wash resistant (water or soap), this permanent coating applied on both sides of the lens makes it highly scratch-resistant and durably delays the appearance of fogging.

**TPR frame
Sealed
Autoclavable**

| MODEL | VERSIONS | SKU # | LENS MARKING | TEMPLE/FRAME MARKING | COATINGS |
|-------------------------------|-----------------|-------|--------------|----------------------|-------------------------|
| COVERALL AUTOCLAVE | Semi-ventilated | 40101 | ☞ Z87+U6 | ☞ Z87+D3, D4, /Z94 | ☞ Anti-scratch/Anti-fog |

DUO

THE ULTIMATE ANTI-FOG GOGGLE

DUO goggles offer total and reinforced protection thanks to the double lens and anti-fog technology.

3.4oz

- + Superior peripheral vision
- + TPR frame
- + Anti-scratch and anti-fog coatings

EQUALIZER

EQUALIZER is the high performance goggle system for protecting against fog. Thanks to its double lens and regulation patch, EQUALIZER filters and regulates moisture levels in the goggles.

DUO NEO

- + **E**QUALIZER technology
- + Neoprene strap: better resistance to hydrocarbons and water - ideal for petrochem application
- + Comfort foam

| MODEL | VERSIONS | SKU # | LENS MARKING | TEMPLE/FRAME MARKING | COATINGS |

WELDING

DIFFERENT PROCEDURES IN ELECTRIC WELDING

Arc welding is a generic term for a process in which an electric arc is created between an electrode and the parts to be assembled.

Electric welding, a trade for experts

Electric arc welding is a method of assembly by fusion with or without additional metal, ideal for the permanent and solid joining of two or more metal pieces. To create this fusion, we use energy from a high intensity, low voltage electric arc between a consumable or refractory electrode and the parts to be assembled. Whatever the arc welding procedure used, the dexterity and experience of the welder are key factors in the resulting welding quality. The different arc welding procedures are as follows: Coated Electrode arc, TIG, PLASMA, MIG/MAG, Flux-core MIG/MAG. Except for the strictly manual Coated Electrode Arc procedure, the other welding procedures can be performed manually or automatically.

Electric arc welding with coated electrodes

This is the best-known welding procedure. The arc releases great heat and is established between the consumable electrode and the parts to be assembled. The fusion of the coating stabilises the arc, provides the gaseous protection and adjusts the metallurgical characteristics of the liquid metal.

This procedure is used in workshops and very often on work sites, principally for non-alloy or low-alloy carbon steels, stainless steels and also for surfacing.

■ **Equivalents:**

- MMA
- SMAW
- Process 111 according to ISO 4063

■ **Electro-optical filter helmet**

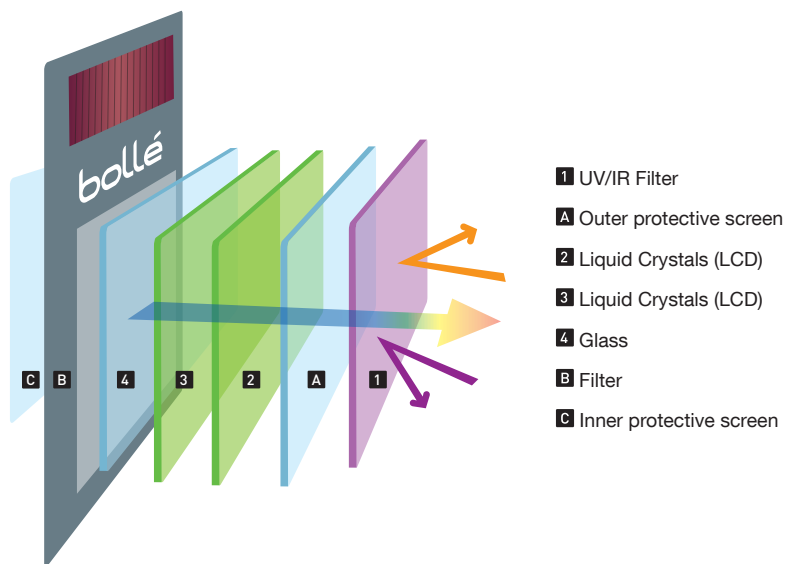

Fusion+

- Coated electrodes
- TIG
- MIG/MAG
- Plasma
- Grinding

ACTIVE FILTERS WITH LIQUID CRYSTALS: "SMART" TECHNOLOGY

Active welding filters provide reliable protection. Whether in a clear or darkened state, they ensure permanent protection against UV / IR emissions, heat, sparks and projections. The filter's degree of protection is defined to avoid "blinding" by the electric arc. Active welding filters must always be used with a welding helmet. When an electric arc is struck, the active welding filters automatically darken and when the arc is extinguished, they return to their initial clear state. So the active welding filters free up the welder's hands and therefore save time, reduce fatigue and greatly improve quality thanks to better arc positioning. These filters must be protected by an external and internal polycarbonate protective screen.

■ **Active Technology: technical filters for optimum protection.**

Fusion+

A COMBINATION OF PERFORMANCE, SAFETY AND STYLE

Inspired by the best assets of its predecessors, FUSION+ brings fantastic optical performance and greater comfort to the range. Suitable for all welding, FUSION+ is the very essence of innovation.

18.5 oz

- + 4 independent sensors
- + 100 x 53 mm field of vision
- + **NEW** Ergonomic shape-memory headband
- + Selection of welding shades and grinding position (shade 4)
- + Variable shades 5-8 / 9-13
- + Reaction time: 0.10 ms
- + Low battery signal & replaceable battery
- + Permanent UV and IR protection
- + Two-year warranty

PRESCRIPTION GLASSES

B808

NO LIMITS ON COMFORT

- Side shields
- Screwless
- 2 sizes - 2 colors

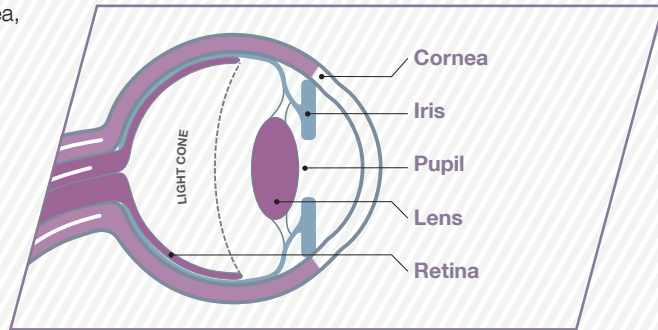

B808 model, page 65.

HOW WE SEE

Vision begins when light rays enter the eye through the cornea, the first transparent tissue. Then, the rays pass through the pupil whose size varies according to the quantity of light that enters the eye.

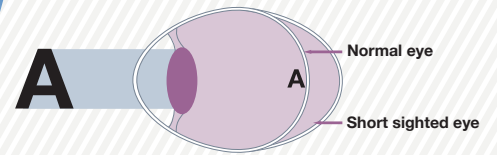

The light rays then pass through the crystalline lens, which, by changing its shape, focuses the light rays on the retina. The information then travels to the brain via the optic nerve, –for interpretation.

How we see

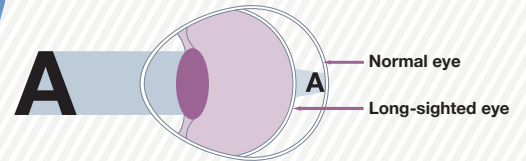

Myopia (short-sightedness):

Short-sighted people can see close up but objects at a distance are blurred. This is because the image perceived by the eye is no longer projected perfectly on the retina but in front of it.

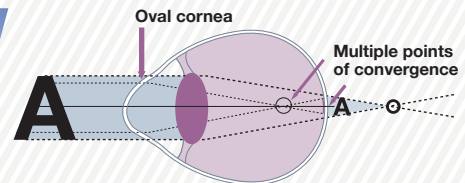

Hypermetropia (long-sightedness):

Long-sighted people can see objects at a distance but those close up are blurred. This is because the image perceived by the eye is no longer projected perfectly on the retina but behind it.

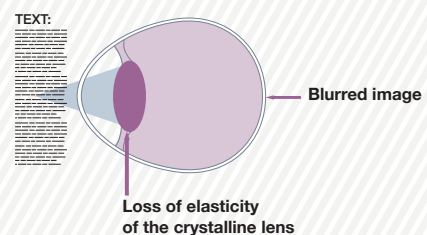

Astigmatism:

People with astigmatism have distorted vision at all distances. This condition is due to an abnormal curve of the cornea and/or crystalline lens.

Presbyopia:

People with presbyopia have blurred near vision (for reading in particular) as, with time, the crystalline lens loses its elasticity and its ability to focus on images perceived.

HOW TO CARE FOR AND CLEAN YOUR EYE PROTECTION ?

bolle
SAFETY

DO's

You must place the glasses under cold water before any washing in order to remove any dust

Clean the lenses softly with our **Bclean** cleansing solutions or wet wipes

Use a clean microfiber soft cloth to dry the lenses

Always carry and store your spectacles in their protective case/pouch.

Spectacles or face shields which are scratched or whose frame is damaged must be replaced

DON'Ts

Never use hot water which can alter/damage the coatings (antireflective, anti-fog)

Never use your clothes, fingers or general purpose tissues to clean lenses

Do not clean with any solvent, detergent or alcohol based cleaning product

Do not place your glasses with the lenses facing downward
