---

## HANDLE

### Brown Synthetic

This heavy-duty Brown Synthetic handle material is a poured, molded plastic known for its toughness and fade resistance.

## BLADES

### Clip

The Clip blade is extremely versatile — just the thing for those everyday tasks at work or around the house. With a sharp point for piercing, the shape allows for better control of the cutting edge.

### Spey

The Spey blade was a vital tool for farmers and ranchers who would use it when castrating livestock. Also a favored tool for skinning game, this all-purpose blade shape is found in many popular knife patterns such as the Trapper.

### Pen

The Pen blade shape was originally designed to cut and sharpen turkey quills for use as ink pens. Today, it still makes a great blade for light-duty work.
