

Vantage Vue® | Quick Setup Guide

Please refer to your manuals for detailed instructions.

1. Prepare the Sensor Suite: attach wind cups and wind vane; pull tab on battery; install debris screen; and rain collector tipping spoon assembly.
2. If using WeatherLink Live, download the WeatherLink app. If using a Console, install power and set up the Console.

3. Verify data transmission from the Sensor Suite to the WeatherLink app and/or to the Console.
4. Mount the Sensor Suite.

Note: For best reception during this step, WeatherLink Live and/or Console and the Sensor Suite should be at least 10 feet (3 meters) apart. (Initial reception typically takes 1-3 minutes but can take up to 10 minutes depending on specific environmental conditions.)
