

FAQ

Can a Fobus holster adversely affect the finish of my firearm?

Fobus holsters are injection molded using high density polymers. Wear to the finish or coating of a firearm can occur with any holster. However, based upon our many years of sales, we have no reason to believe that use of our holsters should cause any wear.

Does the 1911CH holster include a barrel bushing tool?

Yes, it clips on to the holster itself and is easily removable. It is a mold-injected barrel bushing tool for assistance in disassembly of your 1911 pistol. The tool is adjustable for both .45cal and 9mm pistols.

Do you offer left handed versions for all of your holsters?

Not every holster is offered in a left-handed version but Fobus holsters is pleased to offer more left handed fits than most other holster brands. Feel free to check our Website for our vast selection of Website holsters or you may contact one of our Customer Service professionals who will be happy to assist you.

How do I adjust the retention pressure for holsters and mag pouches that come with a tension screw?

For holsters or mag pouches that come with an adjustment retention screw, you can adjust the retention pressure by turning the screw based upon your personal retention preference. Please keep in mind that the tension screw is not pre-set and must be adjusted accordingly.

How does the ROTO-holster system work?

The Roto-Holster system provides for a 360 degree holster rotation and is compatible with any Fobus mounting option. It includes an adjustment screw for easy assembly and rotation. To adjust the angle of the holster or mag pouch, loosen the adjustment screw on the back of the holster or mag pouch and rotate to the desired position. Ensure that the holster locks into one of the pre-set locking positions and tighten the adjustment screw on the back of the holster to secure rotation position. **DO NOT ADJUST THE ROTATION OF YOUR HOLSTER WHICH WOULD RESULT IN THE GRIP (REAR) OF YOUR FIREARM BEING CLOSER TO THE GROUND (UPSIDE DOWN) THAN THE MUZZLE (OR FRONT) OF YOUR FIREARM.**

How can I loosen the retention pressure on the Standard Series holster?

The Standard Series is a passive retention holster. When un-holstering, you must do so in a deliberate and rapid, upward motion. Dry silicone spray may be used in the trigger guard area of the holster as a means of lowering the level of retention.

Will the Universal IWB fit my firearm?

The Universal Inside the Waistband Series holsters are designed to accommodate multiple same-sized pistols. The IWBL is for large frame pistols, the IWBM is for medium frame pistols and the IWBS is for small frame pistols. Please see our Website for examples of firearms which fit in the Universal IWB holsters. In the event that you purchased a size that does not properly fit your firearm, please contact one of our Customer Service professionals who will be happy to assist you with an exchange and/or refund. The Universal IWB holsters **DO NOT** have a standard passive retention mechanism. Refrain from inverting the Universal IWB holster when not being worn. **RETENTION IS ONLY ATTAINED WHEN THE HOLSTER IS PROPERLY WORN ON THE BODY.**

How do I wear the paddle style holster or mag pouch?

Place the paddle inside your pants. Firmly push down until the ridges on the inside on the paddle are resting on your beltline inside your pants. A belt should be worn and tightened accordingly.
