

FAQ

How do I attach a quiver to my Optimizer sight?

The Optimizer Lite includes (2) metal standoffs and mounting hardware to mount most bow quivers.

The Optimizer Lite Ultra comes with an aluminum bracket that must be mounted to the sight first. You then mount your quiver bracket to it. Both the bracket and mounting hardware are included with the Ultra.

How do I change out the fiber optic in my Optimizer sight?

The fibers are not interchangeable and cannot be sent into the factory for a different size or color. However, additional apertures are available from any HHA retailer and can be purchased in .010, .019 and .029 diameter and in either red or green.

How does the mechanical rheostat work on my Optimizer sight?

Any HHA sight with a "55" in the part number will have our exclusive built in mechanical rheostat feature. It allows you to infinitely brighten or dim the fiber optic pin by simply exposing more or less fiber.
