

## TECH DETAILS

### CONTINUOUS ROCKER

The rocker line that started it all. Speed and fluid, predictable pop truly define this rocker. Designed to carry great speed into the wake with minimal drag, a Continuous rocker generates a longer trajectory with similar pop every time.

### MONOCOQUE CONSTRUCTION

Integrating the top and bottom fiberglass layers into one. Generating a more durable board on side impacts to prevent delamination.

### LAYERED GLASS

Our fiberglass is available in 3 weights depending on the board. Over time, traditional woven glass fibers will separate. With layered glass every Hyperlite deck will have the same pop off the double up year after year.

### MOLDED IN FINS

Non detachable fins designed into the board's shape for added stability and solid edge hold.

### MOLDED LANDING FEATURE

Design feature/shape dispersing water on impact for softer landings.

### BIOLITE 3 CORE

The secret recipe we have been perfecting since day one. This core material is the gold standard in the industry and used throughout our line. Biolite 3 is our lightest and most durable formula to date.

### FULL BEVELED EDGE

An angled edge shape, a beveled edge provides forgiveness on features or butter sliding on the water, preventing face plants and running 360 degrees around the board's profile.

### M6 INSERTS

Delivers a more secure fit of the bolts to the inserts, improving bolt retention keeping binding hardware locked down.

When it comes to quality water sports equipment & accessories, Hyperlite is the brand you can depend on.
