GRAPPLE POINTS

Technology

Stages Of Operation

- 1) Closed, small profile for true tracking underwater and deep penetration.
- 2) Open, extra large holding area to eliminate pull outs.
- 3) Release, barbs fold forward to allow for quick removal of fish from arrow.
- 4) The cutaway view shows stud on the front of the body engaging the bushing inside of the tip. This stops vibration and eliminates

loose and lost tips, a problem that plagues other points.

[Rely on premium archery by Innerloc if you're looking for quality and efficiency.](#)
