

TWM-Series Handgun Light Modular Insert Reference Guide

P2 (Pre-installed)

TWM-350
TWM-350S
TWM-850XL
TWM-850XLS

The firearm must have a tactical rail and at least one cross rail slot. The TWM is not designed to be used on a firearm that does not have a cross rail slot.

NOTE: The TWM comes pre-configured with the P2 modular insert. If the fit is not correct for your specific handgun model, use the reference chart below as a guide to switch to the P1 or P3 insert that works best for your firearm. Correct key installation allows the light to slide close to the trigger guard with only a slight visible gap. Reducing the gap ensures proper fit with most holsters.

- Push inward on the head of the rail clamp tension thumbscrew to fully open the adjustable portion of the rail clamp.
- Align the insert tab with the appropriate slot on the tactical rail of your handgun. Rotate the rail clamp of the TWM onto your handgun's rail so that the insert is fully seated in the slot.
- While making sure that the insert remains fully seated in the slot, tighten the rail clamp tension thumbscrew by hand.
- Use a coin to fully tighten the tension thumbscrew.

IMPORTANT: Periodically check to insure that the Allen screw and rail clamp tension thumbscrew remain tight.
