

STEALTHWAVE™

Pestrepeller

Discreet design fits into corners and under most cabinets

The Stealth Wave™ is an effective & environmentally friendly way to combat pests without visitors knowing you have a rodent problem. The device produces a strong sound pressure in the air, attacking the auditory and nervous systems of mice and rats, which causes them to abandon their food sources and shelters. It also utilizes automatic wave variation, minimizing the chance that pests become immune to the sound. The ultrasonic sounds continuously penetrate up to 4,000 unobstructed square feet to chase away the mice and rats effectively.

The Stealth Wave has a discreet, specialized design that allows the device to fit well into corners and under most kitchen cabinets where it will be out of sight. This hidden device ensures that your invited guests never learn about your other unwanted visitors.

- Powerful ultrasonic sound
- Effective up to 4,000 sq. feet
- Designed to fit well in corners
- Harmless to humans & most pets*

*Do not use in the presence of Gerbils, Hamsters, Guinea Pigs, and other rodent pets.

Specifications:	
Model:	P7790
