About Foldable Solar Panels

PowerFilm Foldable Solar Panels are lightweight, durable and extremely portable.

Light-sensitive technology allows foldables to turn on earlier in the day and stay on later in the day compared to traditional crystalline panels. The solar panels are mounted to weather resistant fabric that quickly folds for storage and unfolds for use.

Designed, engineered and manufactured in the United States, Foldable Solar Panels possess unmatched durability allowing for use in harsh environments and panels that work even if a portion is damaged.

These compact panels fit easily into most backpacks and are perfect for powering a wide range of electronics using PowerFilm's numerous accessories and adapters.

Foldable Solar Panels keep you connected, power your outdoor life and help you get more out of your adventures.

PowerFilm offers a wide variety of panel sizes ranging from 5W to 220W and specializes in custom solutions to meet your needs.
