**2000**

**2002**

**1980's**

Force 7 all weather insulated jacket first promoted.

**1987**

Exclusive Softie® insulation is developed and launched as a viable alternative to down.

**1990**

We start to become a force in the military.

**1995**

Snugpak® help develop a synthetic fill diving under suit for Weezle Diving.

**2000**

Snugpak® Weezle Diving Suit wins Millenium Products

## ABOUT US

Snugpak® is a true pioneering British company. After 43 Years, the company has grown from a cottage industry into an internationally recognized brand. Snugpak® products have been used on every permanently inhabited continent and the company enjoys long standing contracts with many government defense agencies for both sleeping bags and clothing. This obviously is due not only to the performance of our products but also our quality workmanship and materials that go into every item Snugpak® proudly puts their name on. The company is still independently owned and operated and continues to manufacture a great deal of its range in the United Kingdom, a reputation for quality and on time delivery ensure our standing as an international brand leader. Snugpak® has also won the Queens Award for Enterprise in International Trade two times. Snugpak® is exclusively distributed in North, Central and South America by Proforce Equipment, Inc.

# OVER 40 YEARS OF EXPERIENCE

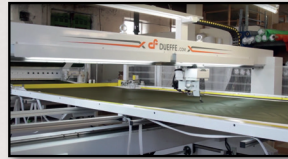

**2008**

Snuggpak® diversify into camping accessories and travel items.

**2011**

Snuggpak® wins Novel Awards for Best Sleeping Bag Innovation.

**2015**

Reinvesting in new machinery.

**2019**

Snuggpak® installed another state of the art automated quilting machine

# SLEEPING BAG COMPARISON CHART

Comfort and Low-temperature figures are given for guidance only. Snuggpak's performance figures are drawn from over forty years of experience and customer feedback. Our comfort figure assumes you will be sleeping lightly clothed (thermal base layer or PJ's) within a tent on a good quality sleep mat, at this external temperature the majority of users should feel comfortable and get a good night's sleep. The low-temperature ratings are temperatures the sleeping bags have been used at by fit individuals with the minimum of discomfort. There are many variables involved in a good night's sleep, including climate, altitude, fitness and metabolism, if in doubt stick to the comfort figure.

# FABRIC

Tough, lightweight, highly windproof and water repellent. Heavy duty, closely constructed fabric. Paratex™ Micro is exceptionally hard wearing but still remains soft to the touch, ideal for outer casings jackets where durability is a prerequisite.

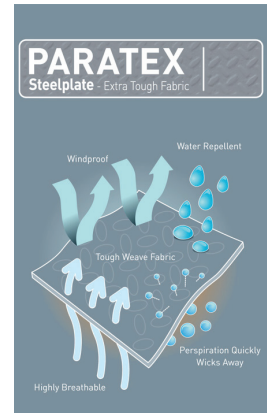

Lightweight highly windproof water repellent fabrics, exceptionally breathable and able to wick moisture away from source, ideal for sleeping bag linings and mid layer insulated clothing. Paratex™ Light is made up of bundles of fine filament yarns. The gaps between the fibers cause moisture to wick across a larger surface area allowing it to evaporate more readily. As the moisture is evaporating from within the fabric the user is not cooled, ideal for a sleeping bag lining!

A 100% Waterproof fabric (Hydrophilic Polyurethane Coating) with a Hydrostatic head in excess of 5000mm (items with a Hydro Static head excess of 1500mm are generally considered Waterproof). All our fabrics are treated with a Durable Water Repellent (DWR) finish. Water repellency can be maintained by a cool tumble dry after washing and periodic retreatment with suitable aftercare products such as Nikwax or Grangers.

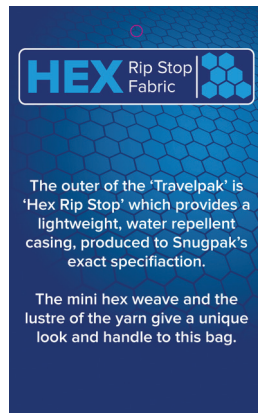

The latest breakthrough in antibacterial technology this specialist antibacterial and antimicrobial treatment on the outer and linings of all the Travelpak® range acts to discourage the growth of bacteria. This results in a reduction of odours and the need for regular laundering of the sleeping bag to keep it smelling fresh, ideal for prolonged tropical travel where temperatures may be high and facilities limited. The Paratex® base fabrics wicking properties and high breathability remain unaffected by the bacteria busting treatments.

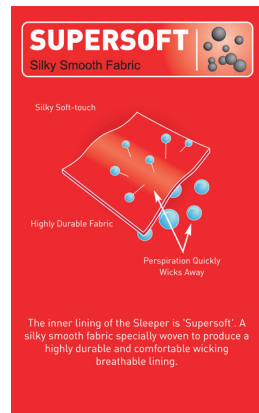

As the name suggests, this fabric is used on the best of Snuggpak's products giving a great balance between aesthetics and performance.

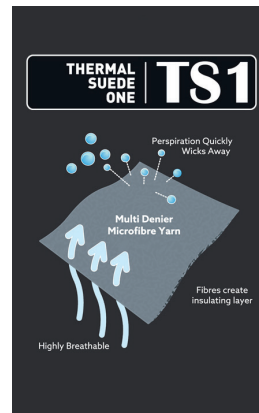

'Micro Diamond Ripstop' provides a lightweight, water repellent casing, produced to Snuggpak's exact specification. The mini diamond weave and the lustre of the yarn give a unique look and handle to this bag.

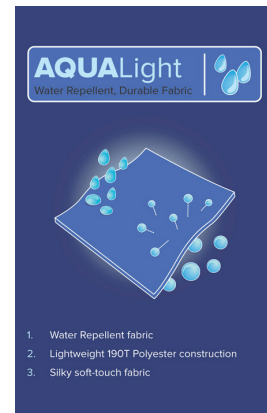

Hex Ripstop provides a lightweight, water repellent casing, produced to Snuggpak's exact specification. The mini hex weave and the lustre of the yarn give a unique look.

The inner lining of the Sleeper is 'Supersoft'. A silky smooth fabric specifically woven to produce a highly durable and comfortable, wicking breathable lining.

A lightweight polyester with a suede finish which uses a combination of yarns with different thickness. Microfiber yarns go on the outside and Macrofiber go on the inside. The construction exploits a basic physical property that water will always move from a low to high surface area or from the Macro to Micro filament yarns, thus moving water from the body towards the outside of the bag.

A water repellent fabric. It has a lightweight 190T Polyester construction and is a Silky soft-touch fabric.

**SOFTIE®**  
Insulation

Another manufacturer's insulation  
Standard insulation, straight thick/bulky fibers with a flat unnatural feel.

Snuggly's Softie® insulation  
Randomised fine filament fibers create extra voids and loft to trap more warm air, which keeping the same weight as a standard insulation.

exclusive to Snuggly®  
**Softie**  
exclusive to Snuggly®

Features:

1. Retains heat even when wet
2. Super-fine filaments
3. Natural soft touch

**SOFTIE® Premier** Insulation

Another manufacturer's insulation  
Standard insulation, straight thick/bulky fibers with a flat unnatural feel.

Snuggly's Softie® Premier insulation  
Randomised fine filament fibers create extra voids and loft to trap more warm air, whilst keeping the same weight as a standard insulation.

exclusive to Snuggly®  
**Softie Premier**  
exclusive to Snuggly®

Features:

1. Retains heat even when wet
2. Washable
3. High Loft
4. Super-fine filaments
5. Natural soft touch

**TRAVELSOFT**  
Ultra-Lightweight High-Loft Insulation

Travel Soft is the inner filling of the "Travelpak" sleeping bags. This insulation is tailored to Snuggly's exact brief. Ultra lightweight high loft fine fibers are used which have excellent compressibility. By design these travel orientated fibers provide less bulk of fill than that of other Snuggly bags, yet are still able to perform very efficiently. The weight of the fibres makes it the perfect fill for adventure travel-orientated sleeping bags.

Features:

1. Retains heat when wet
2. Washable
3. High Loft, Superfine Filaments

**REFLECTATHERM**  
Space-Age Heat Reflective Fabric

Reflects & Traps Heat

Breathable

Features:

1. Specially coated with metallic dots which help to trap heat
2. Excellent weight-to-warmth ratio
3. Coating does not affect breathability

**ISOFIBRE**  
Fibre Insulation

Our "Sleeper" range are filled with "Isofibre" siliconised hollowfiber. The synthetic fibres are structured to trap warm air between tiny cavities in the fiber. When unpacked the "Hollowfibres" decompress and spring back to gain maximum re-loft.

Features:

1. Retains heat when wet
2. Washable

Softie® The brand name for the synthetic (Polyester) filling we use for the Softie® ranges of sleeping bags. It utilizes superfine yarns bound with special resins to produce a luxurious down like feel. It is created from staple yarns which mirror the compositions (as opposed to continuously extruded as in most synthetic fills) a variety of yarn processes are applied to give a more random effect, that is some are curled, some crimped and some are just left as they are. The random nature of the process results in a product that closely resembles the structure of natural insulators and the way they perform. Given all this technology Softie® is still easy to care for, washable and retains a lot of its thermal properties when wet.

Softie® Premier uses the same basic principles as traditional Softie® but improvements in extrusion technology and binding resins in a finer, softer and more durable insulation. Both Softie® and Softie® Premier are exclusive to Snuggly®.

Travelsoft insulation is tailored to Snuggly's exact brief. Ultra lightweight high loft fine fibers are used which have excellent compressibility. By design these travel orientated fibers provide less bulk of fill, yet are still able to perform very efficiently. The weight of the fibers makes it the perfect fill for adventure travel-orientated equipment.

Reflectatherm® layer – "Space Age technology in a down to earth application". This metalized fabric is designed to reflect heat and retain warmth. A highly breathable material, which adds little to the weight or pack size of the product but provides at least 15% additional warmth whilst being undetectable by touch in the sleeping bag or garment.

Our Sleeper range series of sleeping bags are filled with ISOFIBRE siliconized hollowfiber. The synthetic fibers are structured to trap warm air between tiny cavities in the fiber. When unpacked the 'Hollowfibres' decompress and spring back to gain maximum re-loft.

### EXPANDA PANEL SYSTEM

The built-in EPS provides the user an additional **5 INCHES** of extra space.

The Softie® Elite Series has a number of extra features, mainly the EPS (Expanda Panel System). When the EPS is not needed, it is an extra thick zip baffle helping to keep out those unwanted drafts. When extra room is needed simply deploy the EPS and zip it together with the zipper of the main body. The EPS provides an additional 5 inches of extra space.

**ROLL-AWAY MOSQUITO NETTING**

Roll-Away Mosquito Netting gives you visibility of your surroundings, have access to fresh air and protection from insects, snakes, etc.

Antibacterial, lightweight and mosquito free! The Jungle bag is one of the smallest sleeping bags in our range, This sleeping bag gives you the perfect sleep solution in warmer or tropical climates, compressing down into an amazingly small pack size for lightweight travel. Complete with a built-in mosquito net, hygienic antibacterial fabrics and compression stuff sack.

Its square shape means it can be opened up into a quilt for more versatility, and its incredibly small compressed pack size makes it perfect for traveling. Also, the Left side and Right Side zip bags can be zipped together to make one large sleeping bag for two.

The Jungle Bag is the perfect solution to an undisturbed night's sleep when you're out in the tropics.

## JUNGLE & TRAVELPAK BLANKETS

The Jungle and Travepak blankets are a warm, lightweight, less bulky alternative to a traditional blanket or poncho liner. Snuggpak engineered these blankets using Travelsoft Insulation, designed for exceptional performance using ultra lightweight, high loft fibers that work superbly even after being compressed into a small, compact size for lightweight travelling. These also have an Antibacterial and anti-microbial treatment and are windproof and water resistant. These blankets will become your best friend when the temperature drops.

The Jungle and Travepak blankets come in two different sizes and all come with a compression stuff sack.

**TRAVELSOFT** |   
Ultra-Lightweight High-Loft Insulation

Travel Soft is the inner filling of the 'Travepak' sleeping bags. This insulation is tailored to Snuggpak's exact brief. Ultra lightweight high loft fine fibres are used which have excellent compressibility. ## TACTICAL RANGE

**PARATEX** Light Technology Fabric | **SOFTIE** Feather Insulation | **REFLECTATHERM** Space-Age Heat Reflective Fabric | **PARATEX** Steelplate Ultra Tough Fabric | **COMPRESSION SACK** Supplied with a Compression Sack | **THERMAL SUED E ONE TS1**

The Tactical Range is one of our most sought-after sleeping bag ranges, using state of the art fabrics to keep you dry, comfortable and warm. It combines water-resistant Paratex Steelplate outer coating with a luxurious TS1™ (Thermal Suede) lining and Reflectatherm fabric which is designed to reflect heat and retain warmth. The construction of the fabrics ensures that any water from the body will be moved to the outside of the bag, and can also add at least 15% additional warmth by reflecting body heat. You can see the outstanding quality and craftsmanship of our UK based production personnel in our Tactical Series range of sleeping bags.

# SLEEPING BAGS

## SLEEP SYSTEMS

### WHAT IS A SLEEP SYSTEM / COMPLETE SYSTEM?

A "Sleep System / Complete System" combines 2 different bags connected with either a Zip Baffle or by connecting or zipping together. These sleeping systems are designed to be layered together to cover all different types of weather conditions. We have 3 different Systems available, the Special Forces System, the Versatile Tactical System and our Quart System.

Use together in extreme conditions or separately to keep weight and pack size proportional to the performance required for your particular mission.

# SPECIAL FORCES COMPLETE SYSTEM

Ultimate versatility was the goal of this systems design so that it suits any trip in any environment. You can use the sleeping bags individually or layer them together to cover all conditions. The Complete System comes with the Special Forces 1 Bag for use in above freezing temperatures and the Special Forces 2 Bag for use in temperatures right down to 14°F/-10°C. Then, when you're in extreme conditions, you place the Special Forces 2 Bag inside the Special Forces 1 Bag and join them together with the extra zip baffle, so you're protected in conditions right down to -4°F/-20°C. When joined in this way, you retain the convenience of closing and opening with one central, quick release zip. Both bags have a reinforced foot area and come with a stuff sack to keep everything together.

## VERSATILE TACTICAL SYSTEM (V.T.S.)

**PARATEX** Light **SOFTIE** Premier **PARATEX** Steelplate **COMPRESSION SACK** Supplied with a 'Compression Sack'

**TAA**  
COMPLIANT

The Snugpak® Versatile Tactical System (V.T.S.) is a system that comprises two versatile bags which can be used together in extreme conditions or separately to keep weight and pack size proportional to the performance required for your particular mission. It comes supplied with one compression stuff sack to house both bags. It has a unique self-contained zip system that allows the bags to be zipped together easily to avoid unnecessary movement when used together.

A "Sleep System / Complete System" combines 2 different bags connected with either a Zip Baffle or by connecting or zipping together. These sleeping systems are designed to be layered together to cover all different types of weather conditions.

- Zips together easily
- Use together in extreme conditions or separately
- Comes with compression stuff sack to house both bags

LOW	10°F / -12°C

# QUART SYSTEM

The Quart System combines our Softie® 3 Merlin with our TS1 Liner and Bivi bag. It can be used as a one or two season sleeping bag. There is a waterproof housing built into the stuff sack to keep the bivi separate after use in case it is wet, so you keep your sleeping bag and liner dry. With this system, you get all three components for a reduced price, rather than purchasing them all separate.

- Combines Softie® Merlin, TS1 Liner and Bivi bag into one sleep system
- Waterproof housing built into the stuff sack to keep the bivi separate after use in case it is wet
- Comes in one compression stuff sack

# BIVVIS

A bivvi bag is like a waterproof jacket for your sleeping bag. It's a thin, waterproof bag that you use over your sleeping bag to protect you from the elements. Snugpak Bivvi Bags are perfect for cold weather conditions. Lightweight, waterproof and windproof, the Bivvi Bag provides protection from weather elements all year round and is small enough to be carried on its own for emergencies. Made of Paratex Dry, a lightweight, durable, 100% waterproof and breathable fabric.

### ANTARCTIC MAT

WEIGHT	20oz
OPEN SIZE	73 x 28 x 1in
PACK SIZE	13 x 6in
ITEM/COLOR	91935-OD OLIVE

In freezing weather, self-inflating, rubber-based mats often crack when rolled, and valves can freeze. The Antarctic mat uses only sleeping bag insulation to prevent heat loss, so no need to worry about anything cracking or freezing. The layer of sleeping bag insulation prevents convective heat loss between your body and the ground. Any perspiration that is wicked away from your sleeping bag will also wick through to the bottom of the mat, leaving your sleeping bag dry.

- **Combine Two Antarctic Mats:** By combining two mats using the hook and loop fasteners around the edges, you can create an emergency sleeping bag or a double layered sleeping mat.
- Can be used under the tent floor, directly on the ground to protect the tent floor from the brush and stones
- The Antarctic mat is very adaptable. You can fold or squash it into different configurations like in a hammock or a tight floor space.
- Use as a Poncho or extra insulation: With the hook and loop fasteners along the edges so you can use it as a poncho on your shoulders, or even wrap it around your body for some extra insulation when sitting down. It can even be used as a simple Hammock under blanket!

**Combine Two Antarctic Mats:** By combining two mats using the hook and loop fasteners around the edges, you can create an emergency sleeping bag or a double layered sleeping mat.

The SJ-Series was designed to give you the perfect outer shell whatever conditions you're facing throughout the year. All three jackets in the range are made with our high tech Paratex Micro outer and Paratex Light inner, keeping any moisture away from your skin, so you stay warm, comfortable and dry. In addition, our Softie Premier filling has great insulating properties, trapping heat and maximizing comfort. The design is tailored to fit the contours of your body, with a water resistant main zip, and a high neck design that keeps out the drafts. Each one is designed for different seasonal weather conditions.

- Water-resistant main zip
- Sleek, concealed side pockets
- Adjustable neck & Waist
- Velcro® patches
- Two way zip
- Left chest inside pocket with zip
- Thumb loops
- Elasticated cuffs
- Shaped fit
