

PARATEX

Steelplate - Extra Tough Fabric

 **Snugpak**

...as the name suggests this fabric is used on the cream of Snugpak's products giving a great balance between aesthetics and performance.

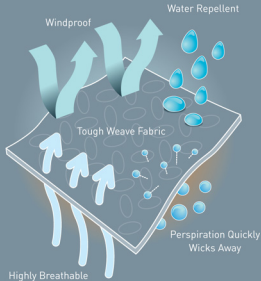

- Lightweight
- Tough Fabric
- Highly Breathable (will transmit 12 litres of moisture per m2 per 24 hours)
- Great Wicking Properties
- Soft to the touch
- Windproof to the industry standard of 3 cubic feet per minute (this keeps strong winds out or when used as a lining warm air and loft in)
- DWR - Durable Water Repellent, a British Standard Spray Rating of 4 Minimum (water repellency can be maintained by a cool tumble dry after washing and periodic re-treatment with suitable after care products such as Nikwax or Grangers)
- Completely manufactured within Europe (Extruded, Woven, Dyed & Finished)

SOFTIE®

Premier - Insulation

As part of our continuing development process to keep our synthetic insulation at the leading edge we are pleased to introduce the next generation in sleeping bag technology. Softie® Premier uses the same basic principles as traditional Softie® but improvements in extrusion technology and binding resins result in a finer, softer and more durable insulation. Both Softie® and Softie® Premier are exclusive to Snuggpak.

*Finer, softer
& more durable*

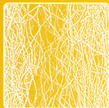

Filling:

SOFTIE® Premier Insulation

SOFTIE®

Premier - Insulation

Another manufacturer's insulation

Standard insulation, straight thick/bulky fibres with a flat unnatural feel...

Snuggpak's Softie® insulation

Randomised fine filament fibres create extra voids and loft to trap more warm air, whilst keeping the same weight as a standard insulation.

Snuggpak's Softie® insulation

Features:

1. Retains heat even when wet
2. Washable
3. High Loft
4. Super-fine filaments
5. Natural soft touch

Premier - Finer, softer & more durable
