

# Trijicon DI<sup>™</sup> Night Sight Fiber Install & Retainer Replacement Instructions

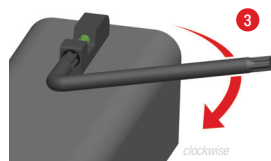

## Cleaning Information

Normal cleaning will not degrade the sights. Avoid exposure to strong organic solvents when used in ultrasonic cleaning machines.

## Fiber Installation Instructions

1. Using T-10 Torque Key provided with your Trijicon DI Night Sight, unscrew the retainer ring located on the face of the front post by rotating it counterclockwise.
2. Insert the pre-cut fiber replacement segment into the sight so that it is sitting against the back shelf of the sight.
3. Re-install the threaded retainer ring by rotating it clockwise until it is hand-tight.

## Installation Tip

For best results, use Trijicon DI<sup>™</sup> replacement fibers. All fibers are finished using a proprietary technique to maximize day and nighttime brightness. Use of alternative fiber pieces could result in inferior performance of product.
