

# WeatherTech®

## Elevate Your Pet's Feeding Experience

The WeatherTech Pet Single High Pet Feeding System was designed from the ground up to provide your pet with the safest and most comfortable eating experience available. The ergonomically designed bowl ensures that your pet won't have to strain their neck and back to get at every tasty morsel of food or every refreshing drop of water. Made in the USA from ultra-tough stainless steel, this is the only pet bowl certified by the NSF to be free of lead, radiation, mercury, cadmium and other toxins.

## Eliminates Mealtime Messes

The heavy-duty mat and stand are made using only the highest quality, FDA approved, non-toxic plastics. This mat features a custom designed raised interior that prevents spilled food and water from pooling underneath your stand and pet bowl. In addition, the mat's raised outer barrier keeps your pet's mealtime messes contained on the easy-to-clean surface and not all over your floor. The soft mat material also creates traction on a wide array of floor surfaces. This anchors the entire pet feeding system in one place, and keeps your floors free of scuff marks. The WeatherTech Pet Elevated Stand features a sloping surface that directs any food or water spills right onto the mat below. The stand also locks securely in place using the raised positioning ribs molded into the mat, so the stand won't move, shift or tumble over during mealtime.

## Quick and Easy-to-Clean

The WeatherTech Pet Single High Pet Feeding System was also designed to be easy-to-clean and maintained. The mat and stand can be simply wiped off with a damp towel or rag for those quick clean ups, and for those tougher messes every piece of the pet feeding system is 100% dishwasher safe!
