

FAQ

Are WellnessMats Environmentally Friendly?

Yes, our mats have a greater life expectancy, keeping WellnessMats out of the landfills and thus contributing to a greener environment. After its minimum 20-year life expectancy, WellnessMats can be recycled.

Are WellnessMats Safe and Non-Toxic?

Yes. WellnessMats 100% polyurethane does not contain PVCs or BPAs and has been rigorously tested and proven to be safe. WellnessMats are also latex and odor free.

Are WellnessMats Safe for Radiant Floors?

Yes. WellnessMats are flame resistant, will never ignite, and have a melting point of 400F making them safe for radiant flooring systems. We have passed CFR 1630/1631 Standard for the Surface Flammability of Carpets and Rugs.

Can I Cut WellnessMats to "Fit" Custom Spaces (i.e. Corner, Lazy Susan, Pillar)?

Yes, you can cut WellnessMats without compromising the properties of your mat or voiding the warranty. With our unique one-piece construction, WellnessMats will never separate or delaminate when cut.

Do WellnessMats Have an Odor?

The polyurethane construction of WellnessMats will not produce "off-gassing", unlike rubber, vinyl and/or biodegradable foam mats.

How Do You Clean WellnessMats?

Our mats require little to no special care. You can spot clean, sweep, stick vacuum (non-brushrolled), or mop as needed. Most spills can be easily cleaned with a towel. For more difficult stains, clean with mild soap and water.

How Do You Justify the Cost of a WellnessMat?

WellnessMats are made of 100% polyurethane, which is a petroleum-based product. They are a molded one-piece construction mat, so the costs of producing them are much higher than less-expensive, multi-layered or glued-together mats. Our "best-in-class" WellnessMats come with a comprehensive 20-Year Manufacturer's Warranty.

How do I pick the right size WellnessMat?

With many sizes to choose from, we want to make sure you get the size that works best for you!

How Much Do WellnessMats Weigh?

- CompanionMat: 4 lbs.

- Scalloped-Bella: 3.5 lbs.
- Semi-Sunburst & Semi-Circle: 5 lbs.

- 40" x 26" PetMat: 11 lbs.
- 45" x 30" PetMat: 12 lbs.
- 54" x 36" PetMat: 18 lbs.

How Thick Are WellnessMats?

WellnessMats are 3/4" thick. That's 50% more (mat = comfort) than many other premium mats on the market. FitnessMats are 5/8" thick. PetMats are 1" thick.

What Are WellnessMats Made Of?

All WellnessMats are made with our APT – Advanced Polyurethane Technology. The core of APT is polyurethane – a premium standard for anti-fatigue mats. It is more expensive than other commonly used materials, but offers the best support and comfort every time you stand on one and it provides exceptional value over time. This gives WellnessMats an extended life-cycle, making them environmentally friendly.

What Does Anti-Microbial Mean?

Anti-microbial is a term given to an object that is capable of destroying or inhibiting the growth of disease-causing microorganisms. Other mats use additive anti-microbial liquid bases to coat their mats. Coated type mats tend to wear off over time and could cause the growth of bacteria. WellnessMats are 99.99% anti-microbial – by design...inherent in our material formulation. No additives are necessary.

Where Can WellnessMats Be Used?

WellnessMats can be used anywhere in the home or workplace where standing occurs. Our mats are perfect for use in the kitchen, vanity, grilling & garage areas, or any hobby including fitness. WellnessMats are also commonly found in commercial or workplace environments.

Will WellnessMats Stain My Floor?

The bottom of WellnessMats are free of paints and coatings that cause staining; our unique proprietary engineering allows the color pigment to be directly injected into the

polyurethane. Company research has found that some types of flooring, and Linoleum in particular, may be made from raw, sometimes inexpensive materials including linseed oil. This type of flooring and floors sealed with a non-urethane based sealer may have a tendency to cause slight discoloring when covered. Although very rare, a few cases are known where linseed oil or the adhesives used to seal floors have an oxidation effect due to lack of UV light over time. This adverse effect could happen with any type of floor covering. If you have any concerns about the chance of any discoloration or material reaction, it is our recommendation that you contact your floor installer to learn more about your finish.

If you have further questions, please email us and a customer service representative will be happy to assist you.

How Long Has Your Company Been In Business?

We launched into the commercial arena in 2000, then expanded into housewares in 2007 and our company continues to grow and expand into new categories.
